The Ecology of Seeds Michael Fenner, Ken Thompson, 2005-02-24 What determines the number and size of the seeds produced by a plant How often should it reproduce them How often should a plant produce them Why and how are seeds dispersed and what are the implications for the diversity and composition of vegetation These are just some of the questions tackled in this wide ranging review of the role of seeds in the ecology of plants The authors bring together information on the ecological aspects of seed biology starting with a consideration of reproductive strategies in seed plants and progressing through the life cycle covering seed maturation dispersal storage in the soil dormancy germination seedling establishment and regeneration in the field The text encompasses a wide range of concepts of general relevance to plant ecology reflecting the central role that the study of seed ecology has played in elucidating many fundamental aspects of plant community function

Advances in Seed Production and Management Ajay Kumar Tiwari, 2021-02-26 High quality seed is essential for healthy crops and greater agricultural productivity At the same time advances in breeding technology require equivalent advances in seed technology In order to ensure food security it is crucial to develop seeds that are high yielding and resistant to drought heat cold and insects Gathering the latest research in seed sciences the book includes contributions on seed production in crops such as legumes sugar rice wheat and other cereals It discusses a range of topics like the effect of climate change on seed quality production and storage seed rouging seed certification for different crop species seed biology and seed pathologies and their effective management Integrating basic and applied research this compendium provides valuable insights for researchers and students in agricultural and life sciences professionals involved in seed certification and those working in quarantine laboratories as well as plant pathologists

Ecology of Soil Seed Banks Mary Allesio Leck, 2012-12-02 Ecology of Soil Seed Banks examines the factors that influence seed bank dynamics and the variety of patterns found among different species This book presents seed banks in a community context to explore the ecological implications of different patterns and thus begin the development of a synthesis by comparing various communities Organized into five parts this book first examines the general processes that influence inputs or losses from the seed bank including predation dormancy germination mechanisms and their evolutionary importance Then this text examines seed banks in a community context Only eight vegetation types are included but the range in diversity of life form length of growing season and dominant environmental conditions allow comparisons of seed bank patterns This book also explores the role of seed banks in vegetation management This reference material will be a valuable reference material to population and

community ecologists and managers Evolutionary consequences of seed banks should be of interest to population and theoretical biologists **Seeds, 3rd Edition** Robert S Gallagher,2013-12-06 The 3rd edition of *Seeds The Ecology of Regeneration in Plant Communities* highlights the many advances in the field of seed ecology and its relationship to plant community dynamics that have taken place in recent years The new edition also features chapters on seed development and morphology seed chemical ecology implications of climate change on regeneration by seed and the functional role of seed banks in agricultural and natural ecosystems The book is aimed at advanced level students and researchers in the fields of seed science seed ecology and plant ecology *Seed Development and Germination* Jaime Kigel,2017-11-01 This text is intended for plant physiologists molecular biologists biochemists biotechnologists geneticists horticulturalists agronomists and botanists and upper level undergraduate and graduate students in these disciplines It integrates advances in the diverse and rapidly expanding field of seed science from ecological and demographic aspects of seed production dispersal and germination to the molecular biology of seed development The book offers a broad multidisciplinary approach that covers both theoretical and applied knowledge General Technical Report RM. ,1987 Basic and Applied Aspects of Seed Biology R.H. Ellis,Michael Black,A.J. Murdoch,T.D. Hong,2012-12-06 The Fifth International Workshop on Seeds was held at the University of Reading UK from 10 to 15 September 1995 Some 230 seed scientists from a wide range of disciplines botanists biochemists ecologists agriculturalists foresters and commercial seedsmen from 31 countries Europe the Americas and Asia participated in the workshop A large number of oral and poster presentations was made during the workshop and we are pleased to publish so many of them in these Proceedings The papers herein are listed by the sessions in which they were presented but as is often the case many papers cover a broader range of topics than the session titles imply For seed physiologists ecologists and technologists this book collates much of the current research on seeds **Plant Breeding Reviews, Volume 7** Jules Janick,2011-01-11 *Plant Breeding Reviews* is an ongoing series presenting state of the art review articles on research in plant genetics especially the breeding of commercially important crops Articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic This detailed analysis bridges the gap between the specialized researcher and the broader community of plant scientists
