Seen And Unseen A Biologist Views Of The Universe:

Seen and Unseen Edward McCrady, 1990 Walker Percy novelist physician says of Edward McCrady's SEEN UNSEEN His approach to a recalculation of science is decidedly unfashionable sorely needed quite fascinating While many scientists agree our material order originated in a big bang millions of years ago those same scientists are not necessarily willing to discern a creator behind that big bang McCrady embryologist college professor takes the idea of creation seriously pursuing its implications Creation implies a creator McCrady asks whether we can come to know something concrete about that creator by looking at the handiwork we call the universe Many thinkers have pursued similar arguments regarding order What sets McCrady's discussion apart is the tantalizing suggestion that we possess clues concerning where the order of human evolution is leading us Whether one takes his conclusions as poetic meditations of a scientist who also happens to be a Christian or whether one takes the conclusions as genuine possibilities will be determined by one's perspective SEEN UNSEEN A BIOLOGIST VIEWS THE UNIVERSE gives an intimate glimpse of a scientist's sincerest probings during the period twentieth century science called to question some of humanity's fondest assumptions regarding its origin destination

Elenchus of Biblica Robert North, 1997 *Synthetic Philosophy ...: First principles. 1920. [v.2-3] The principles of biology. v.1, rev. & enl. ed., 1921* Herbert Spencer, 1920 **Explorations in Knowledge**, 1992 *Reconciling Science and Religion* Peter J. Bowler, 2014-04 Although much has been written about the vigorous debates over science and religion in the Victorian era little attention has been paid to their continuing importance in early twentieth century Britain *Reconciling Science and Religion* provides a comprehensive survey of the interplay between British science and religion from the late nineteenth century to World War II Peter J Bowler argues that unlike the United States where a strong fundamentalist opposition to evolutionism developed in the 1920s most famously expressed in the Scopes monkey trial of 1925 in Britain there was a concerted effort to reconcile science and religion Intellectually conservative scientists championed the

reconciliation and were supported by liberal theologians in the Free Churches and the Church of England especially the Anglican Modernists Popular writers such as Julian Huxley and George Bernard Shaw sought to create a non Christian religion similar in some respects to the Modernist position Younger scientists and secularists including Rationalists such as H G Wells and the Marxists tended to oppose these efforts as did conservative Christians who saw the liberal position as a betrayal of the true spirit of their religion With the increased social tensions of the 1930s as the churches moved toward a neo orthodoxy unfriendly to natural theology and biologists adopted the Modern Synthesis of genetics and evolutionary theory the proposed reconciliation fell apart Because the tensions between science and religion and efforts at reconciling the two are still very much with us today Bowler s book will be important for everyone interested in these issues *Subject Guide to Books in Print* ,1997

The Journal of science and annals of biology, astronancy, geology, industrial arts, manufactures and technology ... Ed. by William Crooks ,1879 **Cosmic Biology** Louis Neal Irwin,Dirk Schulze-Makuch,2010-12-08 In Cosmic Biology Louis Irwin and Dirk Schulze Makuch guide readers through the range of planetary habitats found in our Solar System and those likely to be found throughout the universe Based on our current knowledge of chemistry energy and evolutionary tendencies the authors envision a variety of possible life forms These range from the familiar species found on Earth to increasingly exotic examples possible under the different conditions of other planets and their satellites Discussions of the great variety of life forms that could evolve in these diverse environments have become particularly relevant in recent years with the discovery of around 300 exoplanets in orbit around other stars and the possibilities for the existence of life in these planetary systems The book also posits a taxonomic classification of the various forms of life that might be found including speculation on the relative abundance of different forms and the generic fate of living systems The fate and future of life on Earth will also be considered The closing passages address the Fermi Paradox and conclude with philosophical reflections on the possible place of Homo sapiens in the potentially vast stream of life across the galaxies

The Scientist as Philosopher Friedel Weinert,2005-10-18 How do major scientific discoveries reshape their originators and our own sense of reality and concept of the physical world The Scientist as Philosopher explores the interaction between physics and philosophy Clearly written and well illustrated the book first places the scientist philosophers in the limelight as we learn how their great scientific discoveries forced them to reconsider the time honored notions with which science had described the natural world Then the book explains that what we understand by nature and science have undergone fundamental conceptual changes as a result of the discoveries of electromagnetism thermodynamics and atomic structure Even more dramatically the quantum theory and special theory of relativity questioned traditional assumptions about causation and the passage of time The author concludes that the dance between science and philosophy is an evolutionary process which will keep them forever entwined [The Biology of Consciousness](#) JJ Semple,2014-07-03 Kundalini is a biological actuality a primordial energy in every human being that is capable of modifying DNA in a single
