algorithms form the logical solution for many complex problems encountered in science and engineering. Although numerical techniques are now well established they have continued to expand and diversify particularly in the fields of engineering analysis and design. Various engineering departments in the University College of Swansea in particular Civil, Chemical, Electrical and Computer Science have groups working in these areas. It is from this mutual interest that the NUMETA conference series was conceived with the main objective of providing a link between engineers developing new numerical techniques and those applying them in practice. Encouraged by the success of NUMETA 85 the second conference NUMETA 87 was held at Swansea 6-10 July 1987. Over two hundred and twenty abstracts were submitted for consideration together with a number of invited papers from experts in the field of numerical methods. The final selection of contributed and invited papers were of a high quality and have culminated in the two volumes which form these proceedings. This volume contains papers on the themes of Numerical Techniques for Engineering Analysis and Design and Developments in Engineering Software. Many new developments on a wide variety of topics have been reported and these proceedings contain a wealth of information and references which we believe will be of great interest to theoreticians and practising engineers alike.

Computational Mathematics, 1985 *Numerical Analysis* James M. Ortega, 1972 Numerical Analysis 1995 D.F. Griffiths, G.A. Watson, 1996-04-11. This volume contains invited papers presented at the 16th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee 27-30 June 1995. The Dundee Conferences are important events in the numerical analysis calendar and the thirteen papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest. The book is a valuable guide to the direction of current research in many areas of numerical analysis. It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations with emphasis on problems in fluid dynamics. It also contains contributions to research into methods of linear algebra, numerical methods for optimisation problems and surface fitting.
