Numerical Linear Algebra on High-Performance Computers Jack J. Dongarra,Iain S. Duff,Danny C. Sorensen,Henk A. van der Vorst,1998-01-01 Provides a rapid introduction to the world of vector and parallel processing for these linear algebra applications **Numerical Linear Algebra for High-performance Computers** Jack J. Dongarra,Iain S. Duff,Danny C. Sorensen,Henk A. van der Vorst,1998-01-01 This book presents a unified treatment of recently developed techniques and current understanding about solving systems of linear equations and large scale eigenvalue problems on high performance computers It provides a rapid introduction to the world of vector and parallel processing for these linear algebra applications Topics include major elements of advanced architecture computers and their performance recent algorithmic development and software for direct solution of dense matrix problems direct solution of sparse systems of equations iterative solution of sparse systems of equations and solution of large sparse eigenvalue problems **Applied Parallel Computing** Bo Kagström,Erik Elmroth,Jack Dongarra,Jerzy Wasniewski,2007-09-22 This book constitutes the thoroughly refereed post proceedings of the 8th International Workshop on Applied Parallel Computing PARA 2006 It covers partial differential equations parallel scientific computing algorithms linear algebra simulation environments algorithms and applications for blue gene L scientific computing tools and applications parallel search algorithms peer to peer computing mobility and security algorithms for single chip multiprocessors *Numerical Linear Algebra for Applications in Statistics* James E. Gentle,2012-12-06 Numerical linear algebra is one of the most important subjects in the field of statistical computing Statistical methods in many areas of application require computations with vectors and matrices This book describes accurate and efficient computer algorithms for factoring matrices solving linear systems of equations and extracting eigenvalues and eigenvectors Although the book is not tied to any particular software system it describes and gives examples of the use of modern computer software for numerical linear algebra An understanding of numerical linear algebra requires basic knowledge both of linear algebra and of how numerical data are stored and manipulated in the computer The book begins with a discussion of the basics of numerical computations and then describes the relevant properties of matrix inverses matrix factorizations matrix and vector norms and other topics in linear algebra hence the book is essentially self contained The topics addressed in this bookconstitute the most important material for an introductory course in statistical computing and should be covered in every such course The book includes exercises and can be used as a text for a first course in statistical computing or as supplementary text for various courses that emphasize computations James Gentle is University Professor of Computational Statistics at George Mason University During a thirteen year hiatus from academic work before joining George Mason he was director of research and design at the world s largest independent producer of Fortran and C general purpose scientific software libraries These libraries implement many algorithms for numerical linear algebra He is a Fellow of the American Statistical Association and member of the International Statistical

Institute He has held several national   **High Performance Computing** Michela Taufer,Bernd Mohr,Julian M.
