## Numerical Methods For Unconstrained:

**Numerical Methods for Unconstrained Optimization and Nonlinear Equations** J. E. Dennis, Jr., Robert B. Schnabel, 1996-12-01 This book has become the standard for a complete state of the art description of the methods for unconstrained optimization and systems of nonlinear equations Originally published in 1983 it provides information needed to understand both the theory and the practice of these methods and provides pseudocode for the problems The algorithms covered are all based on Newton's method or quasi Newton methods and the heart of the book is the material on computational methods for multidimensional unconstrained optimization and nonlinear equation problems The republication of this book by SIAM is driven by a continuing demand for specific and sound advice on how to solve real problems The level of presentation is consistent throughout with a good mix of examples and theory making it a valuable text at both the graduate and undergraduate level It has been praised as excellent for courses with approximately the same name as the book title and would also be useful as a supplemental text for a nonlinear programming or a numerical analysis course Many exercises are provided to illustrate and develop the ideas in the text A large appendix provides a mechanism for class projects and a reference for readers who want the details of the algorithms Practitioners may use this book for self study and reference For complete understanding readers should have a background in calculus and linear algebra The book does contain background material in multivariable calculus and numerical linear algebra
