Abstract Parabolic Evolution Equations and their Applications Atsushi Yagi, 2009-11-03 This monograph is intended to present the fundamentals of the theory of abstract parabolic evolution equations and to show how to apply to various nonlinear diffusion equations and systems arising in science. The theory gives us a unified and systematic treatment for concrete nonlinear diffusion models. Three main approaches are known to the abstract parabolic evolution equations namely the semigroup methods, the variational methods and the methods of using operational equations. In order to keep the volume of the monograph in reasonable length we will focus on the semigroup methods. For other two approaches see the related references in Bibliography. The semigroup methods which go back to the invention of the analytic semigroups in the middle of the last century are characterized by precise formulas representing the solutions of the Cauchy problem for evolution equations. The analytic semigroup e^{tA} generated by a linear operator A provides directly a fundamental solution to the Cauchy problem for an autonomous linear evolution equation $u_t = Au$, $u(0) = u_0$.

Partial Differential Equations in Anisotropic Musielak-Orlicz Spaces Iwona Chlebicka, Piotr Gwiazda, Agnieszka Świerczewska-Gwiazda, Aneta Wróblewska-Kamińska, 2021-11-01 This book provides a detailed study of nonlinear partial differential equations satisfying certain nonstandard growth conditions which simultaneously extend polynomial inhomogeneous and fully anisotropic growth. The common property of the many different kinds of equations considered is that the growth conditions of the highest order operators lead to a formulation of the equations in Musielak-Orlicz spaces. This high level of generality understood as full anisotropy and inhomogeneity requires new proof concepts and a generalization of the formalism calling for an extended functional analytic framework. This theory is established in the first part of the book which serves as an introduction to the subject but is also an important ingredient of the whole story. The second part uses these theoretical tools for various types of PDEs including abstract and parabolic equations but also PDEs arising from fluid and solid mechanics. For connoisseurs there is a short chapter on homogenization of elliptic PDEs. The book will be of interest to researchers working in PDEs and in functional analysis.
