Nurses Of Advice:

Contexts of Nursing John Daly, 2009 Contexts of Nursing 3e builds on the strengths of previous editions and continues to provide nursing students with comprehensive coverage of core ideas and perspectives underpinning the practice of nursing the new edition has been thoroughly revised and updated New material on Cultural Awareness and Contemporary Approaches in Nursing has been introduced to reflect the realities of practice Nursing themes are discussed and are supported by illustrated examples and evidence Each chapter focuses on an area of study within the undergraduate nursing program and the new edition continues its dis

Telephone advice nursing Christina Johnson, 2019-01-04 Background Telenursing has rapidly expanded in many countries In Sweden a national telephone advisory nursing service reaches the entire nation and receives approximately 4 5 million calls per year The six phase nursing process assessment nursing diagnosis setting goals planning implementation and evaluation can be used when managing a caller s health problem In telenursing a person centred approach makes for more satisfied and appreciative callers The core component of interaction is the verbal communication between the telenurse and caller Several studies have revealed the need for the development of communication competence in telenursing Structured analyses of conversations between telenurses and callers is one way to increase telenurses awareness of their communication and interpersonal competence This type of analysis requires a valid formative self assessment tool To evaluate communicative effectiveness the patient perspective of the interpersonal aspects of interaction are described as a necessary component and satisfaction surveys designed for a telenursing context are recommended Therefore a questionnaire is needed that evaluates the effects of telenurse communication training from the caller s perspective Aims The overall aim of these two studies was to develop tools to enable improvements and evaluations in communication and interpersonal competence in telenursing from the perspective of both the telenurse and the caller Study 1 To develop a self assessment tool aiming to raise telenurses awareness of their communication and interpersonal competence and highlight areas in need of improvement Study 2 To develop and assess content validity of a theoretically anchored questionnaire that explores caller satisfaction in TAN as a result of the interaction between the caller and the telenurse Methods Study 1 The development and the evaluation of content validity of the Telenursing Self Assessment Tool TSAT started with a literature search and domain identification which were used to generate the items The assessment of the content validity was performed in two steps First an expert group completed two rounds of assessments using Content Validity Index CVI Second telenurses tested the tool and assessed the content validity using CVI Thereafter the telenurses participated in consensus discussions Refinements of the tool were done after every assessment Study 2 The development and the evaluation of content validity of the Telenursing Interaction and Satisfaction Questionnaire TISQ started with a literature search and domain identification which were used to generate the items The assessment of the content validity was performed in two steps First cognitive interviews were performed with the callers the target population Next experts

evaluated the content validity using CVI Refinements of the tool were done after every assessment The Interaction Model of Client Health Behavior IMCHB provided theoretical guidance and support Results Study 1 The TSAT with 58 items was developed The items were structured according to the nursing process and the tool was judged as having good content validity Study 2 The TISQ consisting of 60 items based on the IMCHB was developed The questionnaire was found to exhibit good content validity Conclusions This thesis describes the development and assessment of content validity of two theoretically anchored tools aimed to improve and evaluate communication and interpersonal competence in telenursing from the perspective of both the telenurse and the caller The TSAT is meant to create learning opportunities to provide self direction feedback and coaching and to guide the telenurse through the nursing process using a person centred approach The TISQ aims to explore the callers satisfaction and the callers perceptions of the interaction with the telenurse With better knowledge about this communication improvement and education in telenursing can be tailored to enhance caller satisfaction
