

Social & Behavior Change in Nutrition: What Works?

Nutrition programs are meaningful only to the degree that they help people do something differently. That is where social and behavior change (SBC) methods can help. In our experience, we have seen program planners miss opportunities to achieve much bigger and more lasting impact of their SBC work. PROJECT DESIGN

1. Plan an ongoing, iterative workflow of the ever-evolving and flexible activities, starting at project start. This approach allows new information to shape understanding of the problem, behavior, and the target audience and can lead to adjustments to help achieve impact on target change in time and budget. It is important to keep an open mind to change in order to stay on track.

2. Develop strong outcomes: Each objective is also an opportunity to change – and there is always design space to make projects work that are also interesting, useful and enjoyable to implement. It is important to be explicit in communication with the target audience to make sure they understand the change. The change should be clear, a specific, measurable, and feasible to both behavior change leaders and the target audience.

3. Address the key challenges: Addressing behavior change is not easy. It is important to address the key challenges to behavior change. Address the key challenges to behavior change.
