second statement seriously Kent sees hunger as a deeply political problem Too many people do not have adequate control over local resources and cannot create the circumstances that would allow them to do meaningful productive work and provide for themselves The human right to an adequate livelihood including the human right to adequate food needs to be implemented worldwide in a systematic way Freedom from Want makes it clear that feeding people will not solve the problem of hunger for feeding programs can only be a short term treatment of a symptom not a cure The real solution lies in empowering the poor Governments in particular must ensure that their people face enabling conditions that allow citizens to provide for themselves In a wider sense Kent brings an understanding of human rights as a universal system applicable to all nations on a global scale If as Kent argues everyone has a human right to adequate food it follows that those who can empower the poor have a duty to see that right implemented and the obligation to be held morally and legally accountable for seeing that that right is realized for everyone everywhere

Cost-Benefit Analysis of the African Risk Capacity Facility Daniel J. Clarke, Ruth Vargas Hill, 2013-11-01 Governments play a key role in supporting populations affected by natural disasters including rebuilding infrastructure to ensure continued services and scaling up public safety nets to prevent widespread hunger and poverty However the traditional approach of

limiting greater spending to the aftermath of a disaster has many drawbacks External support from bilateral or multilateral donors can be slow and unreliable Private sector reinsurance can be prohibitively expensive And reallocating budgets toward recovery and reconstruction is typically a slow process that can even hurt long term development by drawing resources away from effective programs Some countries are trying to mitigate this liability by banding together and creating sovereign catastrophe risk pools that allow governments to coordinate with one another to insure their uncertain fiscal liabilities at lower cost Countries contribute to the pool which then provides payments if an insured natural disaster strikes The African Risk Capacity ARC has been proposed as a pan Africa drought risk pool to insure against drought risk in Africa south of the Sahara If fully operationalized the ARC will mark a major change in how donors fund emergency support to countries in Africa during times of need In this paper we undertake a cost benefit analysis of the ARC pool and discuss how lessons can inform the design of the ARC
