No child grows up too quickly. Children who regularly experience trauma are exposed to more than they are capable of processing. As a result, they often present a facade which falsely conveys that they are more secure and mature than they really are. The consequences of such assumptions are potentially harmful to their health, development, and well-being. *Just Enough Light* is much more than a story chronicling the impact of divorce on a child raised by a parent suffering from mental illness, incapable of providing the necessary material and emotional support for her children. It is a tribute to the triumphant power of belief and the will to emerge from the despair of drug addiction, violence, anxiety, and depression, and ultimately persevere. What makes this story so compelling is that it is presented from a unique perspective. As each experience unfolds from childhood through adolescence, it is presented through the mindset of the child's age at the time. Both gut-wrenching and touching, it reaffirms the resilient nature of the human spirit and the truth that change and redemption are always possible. Perhaps the most important message of this story is how it affirms the transformative power of human connection through intentional acts of grace. When Trucks Stop Running A.J. Friedemann, 2015-12-09 In lively and engaging language this book describes our dependence on freight transport and its vulnerability to diminishing supplies and high prices of oil Ships trucks and trains are the backbone of civilization hauling the goods that fulfill our every need and desire Their powerful highly efficient diesel combustion engines are exquisitely fine tuned to burn petroleum based diesel fuel These engines and the fuels that fire them have been among the most transformative yet disruptive technologies on the planet Although this transportation revolution has allowed many of us to fill our homes with global goods even a past emperor would envy our era of abundance and the freight transport system in particular is predicated on the affordability and high energy density of a single fuel oil This book explores alternatives to this finite resource including other liquid fuels truck and locomotive batteries and utility scale energy storage technology and various forms of renewable electricity to support electrified transport Transportation also must adapt to other challenges Threats from climate change financial busts supply chain failure and transportation infrastructure decay Robert Hirsch who wrote the *Peaking of World Oil Production* report for the U S Department of Energy in 2005 said that planning for peak world production must start at least 10 if not 20 years ahead of time What little planning exists focuses mainly on how to accommodate 30 percent more economic growth while averting climate change ignoring the possibility that we are at or near the end of growth Taken for granted the modern transportation system will not endure forever The time is now to take a realistic and critical look at the choices ahead and how the future of transportation may unfold
