

III. Movement Across Membranes

– Passive Transport

- A. Simple Diffusion – molecules that are **SMALL ENOUGH** to fit through the phospholipid bilayer move from areas of high concentration to low concentration. Requires no energy input.
- B. Facilitated Diffusion – a molecule diffuses through a protein channel. Still moving from a high to low concentration gradient, requiring no energy input.

Protein Movement Across Membranes:

Protein Movement Across Membranes Jerry Eichler, 2007-02-26 This book addresses the most recent advances in the transport of proteins across a variety of biological membranes In addressing this topic this volume includes several new twists not previously addressed in the literature In the last few years the study of protein translocation has been revolutionized by the availability of structural information on many of the components and complexes involved in the process Unlike earlier books written on protein translocation this volume considers these advances In addition several chapters discuss facets of protein translocation from a systems biology perspective considered by many to be the next paradigm for biological study Readers of this book will come away with a deeper understanding of the problems facing researchers of protein translocation and see how the most modern biological techniques and approaches are being recruited to answer those questions The chapters are also written such that problems awaiting future investigation are clearly presented
