Protein Stability And Folding Supplement 1 A Collection Of Thermodynamic Data:

Protein Stability and Folding Supplement 1 Wolfgang Pfeil, 2001 The modern biosciences make many new proteins available Nevertheless the handling of these proteins is quite difficult due to problems with their stability This collection gives in the form of tables protein stability data for various temperatures and solvents These data are most useful for the development of protein folding and the improvement of biotechnological stability for applications of proteins The first supplement contains material covering 1997-1999 Some previous data have also been included into the present work Previous papers on denaturant induced protein unfolding have been reconsidered to include additional parameters Furthermore data on TFE induced unfolding have been arranged in a new Table Finally some data have been added which slipped through during the preparation of the data collection

Protein Stability and Folding Supplement 1 Wolfgang Pfeil, 2012-10-21 The modern biosciences make many new proteins available Nevertheless the handling of these proteins is quite difficult due to problems with their stability This updated and revised collection gives in the form of tables protein stability data for various temperatures and solvents

Protein Stability and Folding Wolfgang Pfeil, 2013-06-29 In 1998 we published the data compilation PROTEIN STABILITY AND FOLDING which covered the data from the early beginnings of thermodynamic studies of protein folding until 1996 Since then the amount of available thermodynamic data has increased nearly twice The data constitute very important additions to the information on the protein folding problem the construction of mutant protein and the practical application of proteins in various fields The Supplement covers the period 1997-1999 and is designed to make the vast amount of present data accessible to multidisciplinary research where chemistry physics biology and medicine are involved and also biotechnology pharmaceutical and food research At the same time the data could be helpful to identify problems unsolved so far and to avoid unnecessary duplication of scientific work The structure of the Supplement is the same as in the previous data compilation However some additional data characterizing protein denaturant interaction and protein unfolding by trifluoroethanol have been added In that context some previous data have been reconsidered The author wishes to thank everyone who provided data ideas or even unpublished results Furthermore support by the Deutsche Forschungsgemeinschaft INK 16 BI I is gratefully acknowledged Finally I would like to thank the staff of Springer Verlag for their efforts and for excellent assistance during the production of the data collections
