Proteinlipid Interactions From Membrane Domains To Cellular Networks

Gregor Anderluh, Jeremy H. Lakey

Proteinlipid Interactions From Membrane Domains To Cellular Networks:

Protein-Lipid Interactions Lukas K. Tamm, 2006-05-12 In 17 contributions by leading research groups this first comprehensive handbook in the field covers the interactions between proteins and lipids that make the fabric of biological membranes from every angle It examines the relevant thermodynamic and structural issues from a basic science perspective and goes on to discuss biochemical and cell biological processes The book covers physical principles as well as mechanisms of membrane fusion and fission Additionally chapters on bilayer structure and protein lipid interactions as well as on how proteins shape lipids and vice versa membrane penetration by toxins protein sorting and allosteric regulation of signal transduction across membranes make this a valuable information source for researchers in academia and industry

Cholesterol Binding and Cholesterol Transport Proteins: J. Robin Harris, 2010-03-10 Knowledge of cholesterol and its interaction with protein molecules is of fundamental importance in both animal and human biology This book contains 22 chapters dealing in depth with structural and functional aspects of the currently known and extremely diverse unrelated families of cholesterol binding and cholesterol transport proteins By drawing together this range of topics the Editor has attempted to correlate this broad field of study for the first time Technical aspects are given considerable emphasis particularly in relation cholesterol reporter molecules and to the isolation and study of membrane cholesterol and sphingomyelin rich raft domains Cell biological biochemical and clinical topics are included in this book which serve to emphasize the acknowledged and important benefits to be gained from the study of cholesterol and cholesterol binding proteins within the biomedical sciences and the involvement of cholesterol in several clinical disorders It is hoped that by presenting this topic in this integrated manner that an appreciation of the fact that there is much more that needs to be taken into account studied and understood than the widely discussed bad and good cholesterol associated respectively with the low and high density lipoproteins LDL and HDL

MACPF/CDC Proteins - Agents of Defence, Attack and Invasion
Gregor Anderluh, Robert Gilbert, 2014-05-05 This book focusses on evolutionary structural and functional aspects of pore forming proteins bringing together prominent researchers in the fields of structural biology and cellular and biophysical techniques The focus is on the MACPF CDC protein super family that was originally discovered because of unexpected structural similarity between a domain present in bacterial cholesterol dependent cytolysins CDC and proteins of the membrane attack complex perforin MACPF family Members of the MACPF CDC super family are crucial for many biological processes being efficient agents of development defence attack and invasion of cells and tissues However their best known role is in bacterial pathogenesis and the proper functioning of the vertebrate immune system via formation of transmembrane pores in target cell membranes The book contains chapters on the distribution of MACPF CDC proteins and on aspects of their evolution and structural properties the similarities between different super family members and functional properties of some of the best known examples The book also contains an overview of biophysical approaches that may be

used in the future to provide further insights into how these interesting proteins function Lehninger Principles of Biochemistry David L. Nelson, Albert L. Lehninger, Michael M. Cox, 2008-02 Authors Dave Nelson and Mike Cox combine the best of the laboratory and best of the classroom introducing exciting new developments while communicating basic principles of biochemistry *Cell Boundaries* Stephen White, Gunnar von Heijne, Donald Engelman, 2021-12-31 The central themes of Cell Boundaries concern the structural and organizational principles underlying cell membranes and how these principles enable function By building a biological and biophysical foundation for understanding the organization of lipids in bilayers and the folding assembly stability and function of membrane proteins the book aims to broaden the knowledge of bioscience students to include the basic physics and physical chemistry that inform us about membranes In doing so it is hoped that physics students will find familiar territory that will lead them to an interest in biology Our progress toward understanding membranes and membrane proteins depends strongly upon the concerted use of both biology and physics It is important for students to know not only what we know but how we have come to know it so Cell Boundaries endeavours to bring out the history behind the central discoveries especially in the early chapters where the foundation is laid for later chapters Science is far more interesting if as students we can appreciate and share in the adventures and misadventures of discovering new scientific knowledge Cell Boundaries was written with advanced undergraduates and beginning graduate students in the biological and physical sciences in mind though this textbook will likely have appeal to researchers and other academics as well Highlights the history of important central discoveries Early chapters lay the foundation for later chapters to build on so knowledge is amassed High quality line diagrams illustrate key concepts and illuminate molecular mechanisms Box features and spreads expand on topics in main text including histories of discoveries special techniques and applications

Study of the Calcium Regulation Mechanism of TCR Activation Using Nanodisc and NMR Technologies Yunchen Bi, 2017-06-20 This thesis describes the use of biophysical and biochemical methods to prove that calcium has a positive feedback effect on amplifying and sustaining CD3 phosphorylation and should enhance T cell sensitivity to foreign antigens The study presented shows that calcium can regulate the signal pathway in cells not only as a secondary messenger but also through direct interactions with the phospholipid bilayer The approach used in the thesis also represents an important advance as it couples the use of nuclear magnetic resonance NMR to the analysis of signaling phenomena in living cells Moreover the thesis optimizes the Nanodisc assembly protocol which can broaden its range of applications in membrane protein studies A preliminary study on the structure of dengue virus NS2B NS3p in complex with aprotinin which may help to develop new drugs against the dengue virus is also included Fundamentals of Children's Applied Pathophysiology Elizabeth Gormley-Fleming, Ian Peate, 2018-08-10 Fundamentals of Children's Applied Pathophysiology introduces nursing and healthcare students to the pathophysiology of the child and offers an applied full colour visual approach throughout Explaining the anatomy of the human body and the effects of disease or illness on normal physiology it enables the reader to

develop the understanding knowledge and skills required to know how to respond and provide safe and effective high quality care to children and their families

Key features Written by an experienced author team Filled with superb full colour illustrations Packed with learning features including key words test your knowledge exercises further reading and learning outcomes Includes case studies to help readers understand how to apply the knowledge in clinical practice Contains links to clinical observations vital signs to look out for investigations boxes red flags to indicate essential information to be aware of when providing care and medication alerts

Fundamentals of Children's Applied Pathophysiology is an ideal book for pre registration nursing students including child and adult nurses as well as for all healthcare professionals who come into contact with children and their families

Protein NMR Lawrence Berliner, 2015-08-24 This book covers new techniques in protein NMR from basic principles to state of the art research It covers a spectrum of topics ranging from a toolbox for how sequence specific resonance assignments can be obtained using a suite of 2D and 3D NMR experiments and tips on how overlap problems can be overcome Further topics include the novel applications of Overhauser dynamic nuclear polarization methods DNP assessing protein structure and aspects of solid state NMR of macroscopically aligned membrane proteins This book is an ideal resource for students and researchers in the fields of biochemistry chemistry and pharmacology and NMR physics Comprehensive and intuitively structured this book examines protein NMR and new novel applications that include the latest technological advances This book also has the features of A selection of various applications and cutting edge advances such as novel applications of Overhauser dynamic nuclear polarization methods DNP and a suite of 2D and 3D NMR experiments and tips on how overlap problems can be overcome A pedagogical approach to the methodology Engaging the reader and student with a clear yet critical presentation of the applications

Fundamentals of Children's Anatomy and Physiology Ian Peate, Elizabeth Gormley-Fleming, 2015-01-27 When caring for the well or ill child recognising and responding to their anatomical and physiological differences is essential Fundamentals of Children's Anatomy and Physiology provides child nursing students and registered nurses with a succinct but complete overview of the structure and function of the child's body plus clinical applications throughout to demonstrate how the concepts relate to real life nursing Each chapter lists learning outcomes and includes clinical considerations body maps a range of high quality illustrations and test your knowledge questions The book is also accompanied by a companion website with further self assessment and quizzes

Proteins Gregor Anderluh, Jeremy H. Lakey, 2011-01-11 Formation of transmembrane pores is a very effective way of killing cells It is thus not surprising that many bacterial and eukaryotic toxic agents are pore forming proteins Pore formation in a target membrane is a complex process composed of several steps proteins need to attach to the lipid membrane possibly aggregate in the plane of the membrane and finally form a pore by inserting part of the polypeptide chain across the lipid bilayer Structural information about toxins at each stage is indispensable for the biochemical and molecular biological studies that aim to understand how pores are formed at the molecular level There are currently only two *Staphylococcus aureus* and

hemolysin E from *Escherichia coli*. Therefore what we know about these proteins was obtained over many years of intense experimentation. We have nevertheless in the last couple of years witnessed a significant rise in structural information on the soluble forms of pore forming proteins. Surprisingly many unexpected similarities with other proteins were noted despite extremely low or insignificant sequence similarity. It appears that lipid membrane binding and formation of transmembrane channels is achieved in many cases by a limited repertoire of structures. This book describes how several of the important pore forming toxin families achieve membrane binding and which structural elements are used for formation of transmembrane pores. Our contributors have thus provided the means for a comparative analysis of several unrelated families.
