Proteins Enzymes Genes The Interplay Of Chemistry And Biology:

Proteins, Enzymes, Genes , From Classical to Modern Chemistry Peter J. T. Morris, Peter John Turnbull Morris, Royal Society of Chemistry (Great Britain), 2002 Most chemists today have either taken part in or been affected by the chemical revolution that has taken place over the course of the last century Developments in instrumentation have changed not just what chemists do but also how they think about chemistry New and exciting areas of previously inaccessible research have been opened up as a direct result of this revolution This is the first book to examine this instrumental revolution and goes on to assess the impact on chemical practice in areas ranging from organic chemistry and biochemistry to environmental analysis and process control thus demonstrating how fundamental and extensive are the changes that have occurred With contributions from internationally recognised specialists this lavishly illustrated book provides a focal point for any historian of chemistry or chemist with an interest in this fascinating topic This book is published in association with the Science Museum London UK and the Chemical Heritage Foundation Philadelphia *Diet for a Large Planet* Chris Otter, 2020-10-12 A history of the unsustainable modern diet heavy in meat wheat and sugar that requires more land and resources than the planet is able to support We are facing a world food crisis of unparalleled proportions Our reliance on unsustainable dietary choices and agricultural systems is causing problems both for human health and the health of our planet Solutions from lab grown food to vegan diets to strictly local food consumption are often discussed but a central question remains how did we get to this point In *Diet for a Large Planet* Chris Otter goes back to the late eighteenth century in Britain where the diet heavy in meat wheat and sugar was developing As Britain underwent steady growth urbanization industrialization and economic expansion the nation altered its food choices shifting away from locally produced plant based nutrition This new diet rich in animal proteins and refined carbohydrates made people taller and stronger but it led to new types of health problems Its production also relied on far greater acreage than Britain itself forcing the nation to become more dependent on global resources Otter shows how this issue expands beyond Britain looking at the global effects of large agro food systems that require more resources than our planet can sustain This comprehensive history helps us understand how the British played a significant role in making red meat white bread and sugar the diet of choice linked to wealth luxury and power and shows how dietary choices connect to the pressing issues of climate change and food supply Biological Thermodynamics Donald T. Haynie, 2008-02-14 This inter disciplinary guide to the thermodynamics of living organisms has been thoroughly revised and updated to provide a uniquely integrated overview of the subject Retaining its highly readable style it will serve as an introduction to the study of energy transformation in the life sciences and particularly as an accessible means for biology biochemistry and bioengineering undergraduate students to acquaint themselves with the physical dimension of their subject The emphasis throughout the text is on understanding basic concepts and developing problem solving skills The mathematical difficulty increases gradually by chapter but no calculus is required Topics covered

include energy and its transformation the First Law of Thermodynamics Gibbs free energy statistical thermodynamics binding equilibria and reaction kinetics Each chapter comprises numerous illustrative examples taken from different areas of biochemistry as well as a broad range of exercises and references for further study

Evolution 2.0 Perry Marshall, 2015-09-01 In the ongoing debate about evolution science and faith face off But the truth is both sides are right and wrong In one corner Atheists like Richard Dawkins Daniel Dennett and Jerry Coyne They insist evolution happens by blind random accident Their devout adherence to Neo Darwinism omits the latest science glossing over crucial questions and fascinating details In the other corner Intelligent Design advocates like William Dembski Stephen Meyer and Michael Behe Many defy scientific consensus maintaining that evolution is a fraud and rejecting common ancestry outright There is a third way Evolution 2 0 proves that while evolution is not a hoax neither is it random nor accidental Changes are targeted adaptive and aware You ll discover How organisms re engineer their genetic destiny in real time Amazing systems living things use to re design themselves Every cell is armed with machinery for editing its own DNA The five amazing tools organisms use to alter their genetics 70 years of scientific discoveries of which the public has heard virtually nothing Perry Marshall approached evolution with skepticism for religious reasons As an engineer he rejected the concept of organisms randomly evolving But an epiphany that DNA is code much like data in our digital age sparked a 10 year journey of in depth research into more than 70 years of under reported evolutionary science This led to a new understanding of evolution an evolution 2 0 that not only furthers technology and medicine but fuels our sense of wonder at life itself This book will open your eyes and transform your thinking about evolution and God You ll gain a deeper appreciation for our place in the universe You ll see the world around you as you ve never seen it before Evolution 2 0 pinpoints the central mystery of biology offering a multimillion dollar technology prize at naturalcode org to the first person who can solve it

A Male Hysteria Edward Beasley, 2024-07-30 A history of diabetes science and the experience of diabetics in the nineteenth century England A Male Hysteria examines both the science of diabetes in nineteenth century England and the testimony of Victorian diabetics What could be known about diabetes given the science of the day And what did new models of diabetes mean for the treatment and self image of diabetics Ideas about diabetes were revolutionized in 1849 by the great French physiologist Claude Bernard After he made rabbits diabetic by pricking their brains diabetes in England came to be thought of as neurological even psychological in origin British diabetics often men were prevented from working or becoming excited treated in the same manner as women who were diagnosed with hysteria Meanwhile discoveries in thermodynamics were applied to diabetics and menstruating women People were assumed to be closed systems wasting energy that couldn t be replenished Thus

diabetics had to stay still if they wanted to live and women had to stay away from education to have the energy to produce children Some people resisted these hysterical views As no brain lesion was ever found in deceased diabetics even after decades of searching the animal model of the disease no longer seemed to apply to humans Some diabetic patients also resisted the hysterical picture including medical professionals both men and women who refused to slow down as the new treatment regimen was mandated Likewise physicians at spas noted that walking long distances seemed to help diabetics A Male Hysteria journeys through nineteenth century diabetes science and the lives of diabetics It examines how science can go wrong when models from one area of inquiry are too excitedly applied to another It also demonstrates the persistence of the psychological stereotype of diabetics as nervous and overworked in the United Kingdom long after medical attention turned to the pancreas and the role of insulin **Planets and Life** Woodruff T.
