Proton Passage Across Cell Membranes:

Proton Passage Across Cell Membranes Gregory R. Bock, Joan Marsh, 2008-04-30 Regulation of intracellular pH is vital to all living cells This symposium covers the control of pH in muscle and nerve cells and the different mechanisms of acid transport across epithelial and other cell membranes Papers describe the development and application of microelectrodes and various techniques in molecular biology to the study of the mechanisms of protein transport Also discusses the significance of pH regulation for the action of hormones and growth factors

Ionic and Volume Changes in the Microenvironment of Nerve and Receptor Cells Eva Sykova, 2012-12-06 Stability of the internal environment in which neuronal elements are situated is unquestionably an important prerequisite for the effective transmission of information in the nervous system During the past decade our knowledge on the microenvironment of nerve cells has expanded The conception that the microenvironment of neurones comprises a fluid with a relatively simple and stable composition is no longer accepted the microenvironment is now envisaged as a dynamic structure whose composition shape and volume changes thereby significantly influencing neuronal function and the transmission of information in the nervous system The modern conception of the neuronal microenvironment is based on the results of research over the last 20 years The extracellular space ECS is comprehended not only as a relatively stable microenvironment containing neurones and glial cells Bernard 1878 but also as a channel for communication between them The close proximity of the neuronal elements in the CNS and the narrowness of the intercellular spaces provides a basis not only for interaction between the elements themselves but also between the elements and their microenvironment Substances which can cross the cell membranes can easily find their way through the microenvironment to adjacent cellular elements In this way the microenvironment can assure non synaptic communication between the relevant neurones Signalization can be coded by modulation of the chemical composition of the ECS in the vicinity of the cell membrane and does not require classic connection by axones dendrites and synapses

Oxygen Transport to Tissue XII J. Piiper, 2013-03-09 The International Society on Oxygen Transport to Tissue ISOTT was founded in 1973 to facilitate the exchange of scientific information among those interested in any aspect of the transport and or utilization of oxygen in tissues Its members span virtually all disciplines extending from various branches of clinical medicine such as anesthesiology ophthalmology and surgery through the basic medical sciences of physiology and biochemistry to most branches of the physical sciences and engineering The seventeenth annual meeting of ISOTT was held in 1989 for four days from July 21 to 24 at the Max Planck Institute for Experimental Medicine and the adjoining University Hospital Klinikum in Goettingen Federal Republic of Germany It attracted 147 active registrants and approximately 40 accompanying persons The very successful format originated by Dr Ian Longmuir in 1985 consisting of posters accompanied by an abbreviated oral summary was continued with slight modification Virtually all of the presentations utilized this format with each poster session preceded by a formal discussion during which the presenter

briefly reviewed the poster aided by a few slides All posters remained in place for the entire four days of the meeting

Cellular and Molecular Approaches to Fish Ionic Regulation, 1995-07-17 Many physiological processes are regulated by the movement of ions into and out of organs tissues and cells During the past decade a variety of new techniques and approaches have contributed to a deeper understanding of the myriad influences ions have on the function and structure of organisms From respiration and excretion to neurological control and metabolic processing ions and their regulation occupy a central role in physiology of fish as well as other organisms Comprehensive update of ionic regulation in fish Focuses on wide variety of organ systems and the influence of ions on organ system function Contributions from an international group

Heisler, 2012-12-06 **The Sodium-Hydrogen Exchanger** Morris Karmazyn, Metin Avkiran, Larry Fliegel, 2012-12-06 I am extremely honored and pleased to have the opportunity to write a few introductory words for this timely volume on Na It exchange This is a field of investigation that I entered into by challenge and necessity embraced with passion and finally left in my quest for new discoveries in growth control Ten years one third of my scientific life has been devoted to uncovering the mysteries of intracellular pH PH regulation with respect to growth factor action I got started on this new topic in 1980 when I heard a rather provocative hypothesis presented by Enrique Rozengurt at an ICN UCLA Keystone meeting on Cell Surface and Malignancy He showed that all mitogens induced amiloride sensitive Na entry into resting cells and proposed that if a compound stimulates Na influx it could be a mitogen In support of his proposal Enrique reported that the amphipathic polypeptide mellitin which induced Na influx was indeed mitogenic for 3T3 cells This was only correlation at this stage However I was fascinated by this talk I immediately approached Enrique to inform him of my skepticism about this beautiful story and to indicate that I would only be convinced when I succeeded in isolating mutant fibroblasts lacking the amiloride sensitive Na transporter Good luck was his response

Neurobiology and Cell Physiology of Chemoreception P.G. Data, H. Acker, Sukhamay Lahiri, 2012-12-06 This volume records the papers presented in Chieti Italy at the 1991 meeting of the International Society for Arterial Chemoreception ISAC This was the eleventh of a series of assemblies held since 1959 This field of research which examines the critical function and mechanisms of O and pHIPCO sensitive cells in 2 2 the body is unique in that it encompasses diverse biological and medical areas The reader of this book will note chapters concerning

modern techniques like in situ hybridization analysis of cell membrane channels and intracellular ion movements immunohistochemistry of peptides hormones and the corresponding receptors of chemoreceptor cells and systemic analysis of reflex pathways involving chemoreceptor cells and their meaning in health and disease This broad spectrum will appeal to readers interested in the chemoreceptor field as well as young scientists seeking a scientific field where not only structural analysis but also a sense for functional connections is required In recognition of the importance of the contribution of a new scientific generation to this field ISAC awarded the prestigious F de Castro C Heymans E Neil prize to A G6rlach a young scientist Also at this meeting the Ferdinando Data Foundation Award for helping scientists from non developed countries to pursue their interest in chemoreception was initiated ISAC held plenary lectures in honor of C Eyzaguirre and R Forster both of whom have contributed greatly to research in the chemoreceptor field Current Bibliographies in Medicine ,1988

Chloride Channels and Carriers in Nerve, Muscle, and Glial Cells F.J. Alvarez-Leefmans, John M. Russell, 2013-06-29 This is a book about how Cl crosses the cell membranes of nerve muscle and glial cells Not so very many years ago a pamphlet rather than book might have resulted from such an endeavor One might ask why Cl the most abundant biological anion attracted so little attention from investigators The main reason was that the prevailing paradigm for cellular ion homeostasis in the 1950s and 1960s assigned Cl a thermodynamically passive and unspecialized role This view was particularly prominent among muscle and neuroscience investigators In searching for reasons for such a negative no pun intended viewpoint it seems to us that it stemmed from two key experimental observations First work on frog skeletal muscle showed that Cl was passively distributed between the cytoplasm and the extracellular fluid Second work on Cl transport in red blood cells confirmed that the Cl transmembrane distribution was thermodynamically passive and in addition showed that Cl crossed the membrane extremely rapidly This latter finding for a long time interpreted as being the result of a high passive chloride electrical permeability Cl made it quite likely that Cl would remain at thermodynamic equilibrium These two observations were generalized and virtually all cells were thought to have a very high P_{Cl} and a thermodynamically passive Cl transmembrane distribution These concepts can still be found in some physiology and neuroscience textbooks
