and Planets V Bo Reipurth, David Jewitt, Klaus Keil, 2007 Protostars and Planets V builds on the latest results from recent advances in ground and space based astronomy and in numerical computing techniques to offer the most detailed and up to date picture of star and planet formation including the formation and early evolution of our own solar system **Planetary Sciences** Imke de Pater, Jack J. Irvine, T. Owen, Luann Becker, Jen Blank, J.R. Brucato, Luigi Colangeli, Sylvie Derenne, Anne Dutrey, Didier Despois, Antonio Lazcano, Francois Robert, 2006-03-05 Astrobiology a new exciting interdisciplinary research field seeks to unravel the origin and evolution of life wherever it might exist in the Universe The current view of the origin of life on Earth is that it is strongly connected to the origin and evolution of our planet and indeed of the Universe as a whole We are fortunate to be living in an era where centuries of speculation about the two ancient and fundamental problems the origin of life and its prevalence in the Universe are being replaced by experimental science The subject of Astrobiology can be approached from many different perspectives This book is focused on abiogenic organic matter from the viewpoint of astronomy and planetary science and considers its potential relevance to the origins of life on Earth and elsewhere Guided by the review papers in this book the

concluding chapter aims to identify key questions to motivate future research and stimulate astrobiological applications of current and future research facilities and space missions Today s rich array of new spacecraft telescopes and dedicated scientists promises a steady flow of discoveries and insights that will ultimately lead us to the answers we seek **The**

Outer Planets and their Moons Therese Encrenaz,R. Kallenbach,Tobias Owen,Christophe Sotin,2005-07-05

Representatives of several scientific communities such as planetary scientists astronomers space physicists chemists and astrobiologists have met with the aim to review the knowledge on four major themes 1 the study of the formation and evolution processes of the outer planets and their satellites beginning with the formation of compounds and planetesimals in the solar nebula and the subsequent evolution of the interiors of the outer planets 2 a comparative study of the atmospheres of the outer planets and Titan 3 the study of the planetary magnetospheres and their interactions with the solar wind and 4 the formation and properties of satellites and rings including their interiors surfaces and their interaction with the solar wind and the magnetospheres of the outer planets Beyond these topics the implications for the prebiotic chemical evolution on Europa and Titan are reviewed At the time of publication the study of the outer planets is particularly motivated by the fact that the Saturn system is being investigated by the Cassini Huygens mission **Protostellar Jets in Context** Kanaris

Tsinganos,Tom Ray,Matthias Stute,2009-09-24 It is over a quarter of a century since the discovery of out flows from young stars The intervening years have led to remarkable advances in our understanding of this phenomenon Much of the progress can be attributed to advances in facilities and technologies including not only larger telescopes but also improved instrument and detector performance In addition protostellar out flows have now been imaged from the ground and space at high spatial resolution e g with HST and at a wide riety of wavelengths from X rays to radio waves revealing more and more about their physics This veritable revolution in observation has been accompanied by an exponential growth in our ability to numerically simulate the launching and pro gation of jets Codes continue to improve they now incorporate more physics and are increasingly ef cient through for example techniques such as adaptive mesh re nement and the use of parallel processing in cluster environments Simulating the launching and propagation of a jet all the way from the vicinity of the star up to 4 several thousand AU a size range of10 is now much closer In more recent times developments in observation theory and numerical s ulation have been joined by laboratory jet experiments reproducing on centimetre scales that which is seen in astrophysics to stretch for several parsecs **Meteorites and the Early Solar System II** Dante S. Lauretta,Harry Y.

McSween,2006-07 They range in size from microscopic particles to masses of many tons The geologic diversity of asteroids and other rocky bodies of the solar system are displayed in the enormous variety of textures and mineralogies observed in meteorites The composition chemistry and mineralogy of primitive meteorites collectively provide evidence for a wide variety of chemical and physical processes This book synthesizes our current understanding of the early solar system summarizing information about processes that occurred before its formation It will be valuable as a textbook for graduate education in

planetary science and as a reference for meteoriticists and researchers in allied fields worldwide Extrasolar Planets Hans Deeg, Juan Antonio Belmonte, Antonio Aparicio, 2007-10-18 This 2007 volume presents the lectures from the sixteenth Winter School of the Instituto de Astrofísica de Canarias which was dedicated to extrasolar planets Research into extrasolar planets is one of the most exciting fields of astrophysics and the past decade has seen a research leap from speculations on the existence of planets orbiting other stars to the discovery of around 200 planets to date The book covers a wide range of issues from the state of the art observational techniques used to detect extrasolar planets to the characterizations of these planets and the techniques used in the remote detection of life It also looks at the insights we can gain from our own Solar System and how we can apply them The contributors all of high standing in the field provide a balanced and varied introduction to extrasolar planets for research astronomers and graduate students bridging theoretical developments and observational advances **Highlights of Spanish Astrophysics II** Jaime Zamorano, Javier Gorgas, Jesús
