Proving Programmes Correct:

The Programming and Proof System ATES Armand Puccetti, 2013-11-11 Today people use a large number of systems ranging in complexity from washing machines to international airline reservation systems. Computers are used in nearly all such systems; accuracy and security are becoming increasingly essential. The design of such computer systems should make use of development methods as systematic as those used in other engineering disciplines. A systematic development method must provide a way of writing specifications which are both precise and concise; it must also supply a way of relating design to specification. A concise specification can be achieved by restricting attention to what a system has to do; all considerations of implementation details are postponed. With computer systems this is done by 1 building an abstract model of the system operations being specified by pre and post conditions 2 defining languages by mapping program texts onto some collection of objects modeling the concepts of the system to be dealt with whose meaning is understood 3 defining complex data objects in terms of abstractions known from mathematics. This last topic, the use of abstract data types, pervades all work on specifications and is necessary in order to apply ideas to systems of significant complexity. The use of mathematics-based notations is the best way to achieve precision.

1 ABSTRACT DATA TYPES PROOF TECHNIQUES From a practical point of view a solution to these three problems consists in introducing abstract data types in the programming languages and to consider formal proof methods.

Interactive Theorem Proving and Program Development Yves Bertot, Pierre Castéran, 2013-03-14 Coq is an interactive proof assistant for the development of mathematical theories and formally certified software. It is based on a theory called the calculus of inductive constructions, a variant of type theory. This book provides a pragmatic introduction to the development of proofs and certified programs using Coq. With its large collection of examples and exercises, it is an invaluable tool for researchers, students, and engineers interested in formal methods and the development of zero fault software.

The Design of Well-Structured and Correct Programs Suad Alagic, Michael A. Arbib, 2013-11-11 The major goal of this book is to present the techniques of top down program design and verification of program correctness hand in hand. It thus aims to give readers a new way of looking at algorithms and their design synthesizing ten years of research in the process. It provides many examples of program and proof development with the aid of a formal and informal treatment of Hoare's method of invariants. Modern widely accepted control structures and data structures are explained in detail together with their formal definitions as a basis for their use in the design of correct algorithms. We provide and apply proof rules for a wide range of program structures including conditionals, loops, procedures, and recursion. We analyze situations in which the restricted use of gotos can be justified, providing a new approach to proof rules for such situations. We study several important techniques of data structuring including arrays, files, records, and linked structures. The secondary goal of this book is to teach the reader how to use the programming language Pascal. This is the first text to teach Pascal programming in a fashion which not only includes advanced algorithms which operate on advanced

data structures but also provides the full axiomatic definition of Pascal due to Wirth and Hoare Our approach to the language is very different from that of a conventional programming text **Program Logics for Certified Compilers** Andrew W. Appel,2014-04-21 This tutorial for graduate students covers practical and theoretical aspects of separation logic with constructions and proofs in Coq **A Strategy for Automatically Generating Programs in the Lucid Programming Language** Sally C. Johnson,1987 **Logic Programming** Philippe Codognet,2001-11-14 This book constitutes the refereed proceedings of the 17th International Conference on Logic Programming ICLP 2001 held in Paphos Cyprus in November December 2001 The 23 revised full papers presented were carefully reviewed and selected from 64 submissions All current aspects of logic programming and computational logics are addressed *Program Verification Using Ada* McGettrick,1982-07-29 Software Testing for Conventional and Logic Programming Oliver Jack,2011-07-11 No detailed description available for Software Testing for Conventional and Logic Programming **Algebraic and Logic Programming** Helene Kirchner,Wolfgang Wechler,1990-09-20 This volume consists of papers presented at the Second International Conference on Algebraic and Logic Programming in Nancy France October 1 3 1990 *Principles and Practice of Constraint Programming - CP97* Gert Smolka,1997-10-15 This book constitutes the refereed proceedings of the Third International Conference on Principles and Practice of Constraint Programming CP 97 held in Linz Austria in October November 1997 The volume presents 37 revised full papers carefully selected from a total of 132 submissions also included are the abstracts of two invited talks and three tutorials The papers address all current aspects of constraint programming Among the topics covered are constraint matching constraint languages set constraints constraint search constraint satisfaction problems scheduling constraint routing temporal constraints constraint graphs local search object oriented constraint programming etc
