Pseudosolution Of Linear Functional Equations Parameters Estimation Of Linear Functional Relationships:

Pseudosolution of Linear Functional Equations Alexander S. Mechenov, 2005-03-21 In the book there are introduced models and methods of construction of pseudo solutions for the well posed and ill posed linear functional equations circumscribing models passive active and complicated experiments Two types of the functional equations are considered systems of the linear algebraic equations and linear integral equations Methods of construction of pseudosolutions are developed in the presence of passive right hand side errors for two types of operator errors passive measurements and active representation errors of the operator and all their combinations For the determined and stochastic models of passive experiments the method of the least distances of construction of pseudosolutions is created the maximum likelihood method of construction of pseudosolutions is applied for active experiments and then methods for combinations of models of regression of passive and of active experiments are created We have constructed regularized variants of these methods for systems of the linear algebraic equations with the degenerated matrices and for linear integral equations of the first kind In pure mathematics the solution techniques of the functional equations with exact input data more often are studied In applied mathematics problem consists in construction of pseudosolutions that is solution of the functional equations with perturbed input data Such problem in many cases is incomparably more complicated The book is devoted to a problem of construction of a pseudosolution the problem of a parameter estimation in the following fundamental sections of applied mathematics confluent models passive active and the every possible mixed experiments **Mathematical Reviews** ,2006 *Journal of Economic Literature* ,2005 *Book Review Index* ,2006 Every 3rd issue is a quarterly cumulation **Reviews in Numerical Analysis, 1980-86** ,1987 These five volumes bring together a wealth of bibliographic information in the area of numerical analysis Containing over 17 600 reviews of articles books and conference proceedings these volumes represent all the numerical analysis entries that appeared in Mathematical Reviews between 1980 and 1986 Author and key indexes appear at the end of volume 5 *Comprehensive Dissertation Index* ,1989 **American Doctoral Dissertations** ,1985 **Dissertation Abstracts International** ,1986 **The Engineering Index Annual** ,1992 Since its creation in 1884 Engineering Index has covered virtually every major engineering innovation from around the world It serves as the historical record of virtually every major engineering innovation of the 20th century Recent content is a vital resource for current awareness new production information technological forecasting and competitive intelligence The world s most comprehensive interdisciplinary engineering database Engineering Index contains over 10 7 million records Each year over 500 000 new abstracts are added from over 5 000 scholarly journals trade magazines and conference proceedings Coverage spans over 175 engineering disciplines from over 80 countries Updated weekly [Linear Functional Equations. Operator Approach](#) Anatolij Antonevich, 1996-01-26 In this book we shall study linear functional equations of the form $m \text{ bu } x \text{ Lak } X \text{ U } Q_k \text{ X f } x \text{ 1 k l}$ where U is an unknown function from a given space F X of functions on a set X $Q_k \text{ X X}$ are given mappings a_k

and f are given functions Our approach is based on the investigation of the operators given by the left hand side of equation 1 In what follows such operators will be called functional operators We will pay special attention to the spectral properties of functional operators first of all to invertibility and the Noether property Since the set X the space $F X$ the mappings Q_k and the coefficients a_k are arbitrary the class of operators of the form 1 is very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications In addition to the classical theory of functional equations among such areas one can indicate the theory of functional differential equations with deviating argument the theory of nonlocal problems for partial differential equations the theory of boundary value problems for the equation of a vibrating string and equations of mixed type a number of problems of the general theory of operator algebras and the theory of dynamical systems the spectral theory of automorphisms of Banach algebras and other problems
