Radiation in Art and Archeometry D.C. Creagh,D.A. Bradley,2000-06-14 inca publications misc creaghcov htmAbout the coverThis book contains twenty chapters covering a wide range of research in the fields of scientific conservation of art and archaeometry The common thread is the use of radiation in these analyses The term radiation is used in the widest possible sense The book encompasses the use of electromagnetic radiation in its microwave infrared visible ultraviolet x ray and ray forms and the use of particulate forms such as electrons neutrons and charged particles for which the Planck s Law relation applies In many cases there is an interplay between the two forms for example proton induced x ray emission PIXE secondary ion mass spectrometry SIMS As far as possible the chapters have been arranged in order of ascending particle energy Thus it commences with the use of microwaves and finishes with the use of rays The authors were chosen on the basis of their expertise as practitioners of their particular field of study This means that for example the mature fields of study such as the IR and UV study of paintings have been written by senior researchers whereas for the emerging fields of synchrotron and neutron techniques the chapters have been written by talented researchers at the commencement of their careers

Analytical Archaeometry Howell Edwards,Peter Vandenabeele,2016-01-13 Analytical Archaeometry describes this interesting and challenging field of research on the border between natural sciences chemistry spectroscopy biology geology and humanities archaeology art history conservation sciences It fills the gap between these two areas whilst focussing on the analytical aspects of this research field The first part of the book studies the main analytical techniques used in this research field The second part expands from the different types of materials usually encountered and the final part is organised around a series of typical research questions The book is not only focussed on archaeological materials but is also accessible to a broader lay audience Overall the book is clearly structured and gives insight into different approaches to the study of analytical providing extensive discussion on a wide range of techniques materials questions and applications Due to the advances in analytical instrumentation and applications in this field it is important to have all this information merged together Academics as well as professionals in archaeology art history museum labs and conservation science will find this an invaluable reference source ensuring the reader is provided with the latest progress in this research field

Bridging Science and Heritage in the Balkans: Studies in Archaeometry and Cultural Heritage Restoration and Conservation Nona Palincas,Corneliu C. Ponta,2019-03-31 In a period when the study of archaeological remains is enriched through new methods derived from the natural sciences and when there is general agreement on the need for more investment in the study restoration and conservation of the tangible cultural heritage this book presents contributions to these fields from South Eastern Europe

Physical Techniques in the Study of Art, Archaeology and Cultural Heritage ,2007-07-06 In Chapter 1 Dudley Creagh writes on synchrotron radiation and its use in art archaeometry and cultural heritage studies Loic Bertrand has written in Chapter 2 on synchrotron imaging for archaeology and art history conservation and palaeontology Dr

Bertrand is Archaeology and cultural heritage officer at the new French synchrotron Synchrotron Soleil Orme les Mesuriers Gif sur Yvette France He is charged with the task of raising the awareness of cultural heritage scientists to the use of synchrotron radiation for their research Chapter 3 has been written by Ivan Cole and his associates Dr David Paterson and Deborah Lau This is concerned with the holistic modelling of gas and aerosol deposition and the degradation of cultural objects Dr Cole is Deputy Chief of the Novel Materials and Processes Division of the Commonwealth Scientific and Industrial Research Organization Melbourne Australia He has over twenty years experience in involvement in projects concerned with the preservation of cultural heritage Ivan is an internationally recognized leader in the field of the life cycle of materials and the development of protective coatings for metals In Chapter 4 Giovanna Di Pietro describes two different types of experiments she has undertaken in the study of the mechanisms underlying the degradation of photographic media In the first Dr Di Pietro describes the degradation of old black and white plate In the second she outlines her attempts to understand the mechanisms by which comparatively modern motion picture film degrades A significant part of this project involved trying to ascertain exactly what dyes were used by Kodak in their motion picture film from about 1980 onwards An entirely new technique for the remote investigation of the pigments in paintings is presented by Maria Kubik in Chapter 5 This technique will significantly enhance the ability of conservators to study the palette of pigments used by artists check for repairs by others and detect fraudulent paintings Demonstrates the amazing efforts being made in using physical techniques for the study of art archaeology and cultural heritage Provides succinct accounts of how cultural heritage is being preserved Looks at how science is being used to enrich our knowledge of the creative arts Synchrotron Radiation Settimio Mobilio, Federico Boscherini, Carlo Meneghini, 2014-08-06 Synchrotron radiation is today extensively used for fundamental and applied research in many different fields of science Its exceptional characteristics in terms of intensity brilliance spectral range time structure and now also coherence pushed many experimental techniques to previously un reachable limits enabling the performance of experiments unbelievable only few years ago The book gives an up to date overview of synchrotron radiation research today with a view to the future starting from its generation and sources its interaction with matter illustrating the main experimental technique employed and provides an overview of the main fields of research in which new and innovative results are obtained The book is addressed to PhD students and young researchers to provide both an introductory and a rather deep knowledge of the field It will also be helpful to experienced researcher who want to approach the field in a professional way **Synchrotron Radiation, Cultural Heritage, Biomineralization** Catherine Dejoie, Pauline Martinetto, Nobumichi Tamura, 2024-11-01 Many areas of material science have been transformed by the use of synchrotron radiation X rays including the fields of cultural heritage materials and biomineralization This book presents a selection of contributions that illustrate recent developments and applications of these tools focused either on the main techniques used in the cultural heritage and biomineralization communities or on specific materials studying their intrinsic

properties or how they change with time Each chapter can be read alone and each individually demonstrates the intimate links between materials and methods The chapters explore the main principles of synchrotron radiation as well as techniques based on X ray absorption and diffraction and give an overview of how these approaches have developed in recent decades in the field of cultural heritage with specific examples such as ancient ceramics corrosion of iron based materials concrete used in Roman monuments and the biomineralization process in sea urchin spines Approaches to the Conformational Analysis

of Biopharmaceuticals Roger L. Lundblad, 2009-12-15 The activity of many biopharmaceutical polymers is dependent on conformation and the next several years will see increased interest in the conformational analysis of these polymers resulting from the development of biosimilar or follow on biological products While a wide variety of approaches to analysis exists finding the most viable ones would

Physics Methods in Archaeometry Società italiana di fisica, 2004 The role of exact sciences in connection with cultural heritage now is well established and a new scientific branch has been generated Archaeometry Literally Archaeometry means measurement on ancient objects It is a multidisciplinary field of investigations where the rigorous methods of exact sciences give a fundamental contribution to solving the problems associated with conservation and restoration as well as to the study itself of the cultural heritage Archaeometry as a scientific research field involves interdisciplinary groups formed by scholars of the humanistic area together with scientists physicists chemists mathematicians biologists engineers etc The primary justification for the need of involving exact sciences in the field which in the past traditionally has been exclusive of Art Historians must no doubt be found in the conservation and restoration activities The second argument which in the public opinion justifies the involvement of science with the world of Art is the confidence that scientific methods are infallible in unmasking forgeries But in our opinion the awareness of the central role of scientific methods as a support for philological and

war and assassinations early instances of air pollution the use of hallucinogens and entheogens and the role of the snake in ancient toxicology Provides the historical background for understanding modern toxicology Illustrates the ways ancient civilizations learned to distinguish safe from hazardous substances how to avoid the hazardous substances and how to use them against enemies Details scholars who compiled compendia of toxic agents Non-destructive Micro Analysis of Cultural Heritage Materials K. Janssens,R. Van Grieken,2004-11-26 This book provides the scientific and technical background materials of non destructive methods of microscopic analysis that are suitable for analysing works of art museum pieces and archaeological artefacts Written by experts in the field this multi author volume contains a number of case studies illustrating the value of these methods The book is suited to natural scientists and analysts looking to increase their knowledge of the various methods that are currently available for non destructive analysis It is also the perfect resource for museum curators archaeologists and art historians seeking to identify one or more suitable methods of analysis that could solve material related problems
