Radiation Safety of Gamma and Electron Irradiation Facilities International Atomic Energy Agency, 1992 Since the 1950s gamma and electron beam facilities have been used for medical industrial and research purposes and their safety record has been very good With the publication of this book international harmonized safety guidance is available for all those involved in the design control and safe use of this type of irradiation facility Subject areas such as the classification of irradiators regulatory control and special procedures are covered and the safety philosophy for all types of irradiators is explained **Handbook on Radiation Environment, Volume 2** Dinesh Kumar Aswal, 2024-05-17 The handbook aims to provide a comprehensive resource for understanding ionizing radiation dosimetry catering to experts policymakers and interested readers The content of the handbook is focused on two main aspects of dose measurements external dosimetry and internal dosimetry The section on external dosimetry covers fundamental principles and discusses monitoring techniques across various environments such as nuclear industrial research and medical facilities It also covers advanced topics like Bayesian inference and retrospective dosimetry The internal dosimetry section explores radionuclide biokinetics simulation techniques dose evaluation and monitoring methods Specific scenarios such as radon inhalation and off normal conditions are addressed highlighting the importance of precision and intervention The handbook serves as a comprehensive resource for students academicians scientists engineers and policymakers interested in seeking an in depth knowledge of radiation dose measurements and its multi faceted aspects in protecting human health and the environment **Ionizing Radiation and Polymers** Jiri George Drobny, 2012-12-31 Radiation processing is widely employed in plastics engineering to enhance the physical properties of polymers such as chemical resistance surface properties mechanical and thermal properties particle size reduction melt properties material compatibility fire retardation etc Drobny introduces readers to the science of ionizing radiation and its effects on polymers and explores the technologies available and their current and emerging applications The resulting book is a valuable guide for a wide range of plastics engineers employing ionizing radiation for polymer treatment in a range of sectors including packaging aerospace defense medical devices and energy applications Radiation resistant polymers are also explored Unlock the potential of ionizing radiation in applications such as electron beam curing and laser joining Gain an understanding of the selection and safe use of radiation treatment equipment The only detailed guide to ionizing radiation written for the plastics engineering community **Radiation Inactivation of Bioterrorism Agents** L.G. Gacsó, C.C. Ponta, 2005-02-25 The use of and problems associated with biological weapons have been of concern to NATO and non NATO military organizations for many years Until recently most of the readily available literature addressed the military issues associated with the possible use of biological weapons on the battlefield the medical effects of the various agents and what was known about medical prophylaxis and treatments Information on other needed countermeasures such as decontamination or public health issues associated with exposure of civilian populations were largely overlooked This

perspective changed dramatically after the contamination of the US Mail system with powdered anthrax spores. Among the significant problems and defensive weaknesses that the anthrax attack revealed was the importance but lack of established industrial scale decontamination methods for large volumes of heterogeneous objects or for complex physical environments. Ultimately these two microbial decontamination problems were solved in very different ways. The contaminated mail was treated with ionizing radiation while the contaminated government buildings were treated with vapor gas phase chemicals. Both the decontamination of the mail and establishing a process for prophylactic treatment of the mail were solved relatively quickly. This was in large part due to the robust radiation biology and technical base derived from the industrial use of ionizing radiation. Contributing to the speed of response was the fact that the attack occurred within the United States and in the home town of many of the technical experts and decision makers allowing official response to be coordinated rapidly.

Radioactivity in the Environment Vlado Valkovic, 2019-04-17. *Radioactivity in the Environment* Second Edition presents the facts on the presence of both natural and manmade radionuclides in the environment. Sources of ionizing radiation that can lead to human exposure are discussed including natural sources, nuclear explosions, nuclear power generation, the use of radiation in medical, industrial and research purposes, and radiation emitting consumer products. In this thoroughly updated edition, users will find new sections on developments in radioactive nuclides in nature and technologically modified exposure to natural radiation, new threats by terrorist individuals, groups, and countries, changes to the status of nuclear power in the world, and more. Additional new sections cover radioisotopes in geo prospecting and the oil industry, the use of radiation in environmental protection, detector types and detectors used for personal dosimetry, the Dirty Bomb, the Fukushima accident, and North Korea testing sites and nuclear capabilities. Includes details of analytical laboratory procedures for radioactivity measurement in different samples. Features a new chapter on decontamination after radiation exposure. Expands the discussion on nuclear fusion to cover ITER and other installations. [Irradiation of Food Commodities](#) Ioannis S. Arvanitoyannis, 2010-06-25. The irradiation of food is a low cost, highly effective method of ensuring food safety and extending shelf life. Public acceptance of irradiation, despite its benefits, however, has been a significant challenge. *Irradiation of Food Commodities* is the first holistic book that looks not only at the techniques, application, and legislation of this method but also addresses the concern of public opinion. Organized into logical themes and written by experts from industry, academia, and research, this book will meet the needs of those working or considering the use of irradiation in their work. Sections focus on legislation, irradiation techniques, and materials detection and risk assessment. Application of irradiation on food and consumer opinion. Insights into regulations from a variety of countries provide important information on government strategies. Extensive coverage of applications from animal food to food for human consumption and disinfestation explores the various potential application opportunities available for consideration. Addresses risk assessment key to governmental and more importantly consumer acceptance. All topics in one volume for the first time provides complete vision.
