

– T_2 processes:

- Pure dephasing of quantum confined excitons is dominated by radiative lifetime of exciton at low temperatures
- Polaronic coupling to excitons gives DOS peaks nonzero width
- Polaronic effects on electrons in QDs will be more like the effects of hydrogenic donors.
- Work with CdTe showed that phonon-induced linewidths of transitions of hydrogenic donors much smaller than those of excitons.
- Sherwin et al. Speculate that the phonon-induced linewidths will be sufficiently small as to not limit operation of the quantum computer.

Laser Wakefield Electron Acceleration Karl Schmid, 2011-05-18 This thesis covers the few cycle laser driven acceleration of electrons in a laser generated plasma This process known as laser wakefield acceleration LWFA relies on strongly driven plasma waves for the generation of accelerating gradients in the vicinity of several 100 GV m a value four

orders of magnitude larger than that attainable by conventional accelerators This thesis demonstrates that laser pulses with an ultrashort duration of 8 fs and a peak power of 6 TW allow the production of electron energies up to 50 MeV via LWFA The special properties of laser accelerated electron pulses namely the ultrashort pulse duration the high brilliance and the high charge density open up new possibilities in many applications of these electron beams *Handbook of Laser Technology and Applications* Chunlei Guo,2021-06-23 This comprehensive handbook gives a fully updated guide to lasers and laser systems including the complete range of their technical applications The first volume outlines the fundamental components of lasers their properties and working principles The second volume gives exhaustive coverage of all major categories of lasers from solid state and semiconductor diode to fiber waveguide gas chemical and dye lasers The third volume covers modern applications in engineering and technology including all new and updated case studies spanning telecommunications and data storage to medicine optical measurement defense and security nanomaterials processing and characterization **Springer Handbook of Lasers and Optics** Frank Träger,2012-05-05 This new edition features numerous updates and additions Especially 4 new chapters on Fiber Optics Integrated Optics Frequency Combs and Interferometry reflect the changes since the first edition In addition major complete updates for the chapters Optical Materials and Their Properties Optical Detectors Nanooptics and Optics far Beyond the Diffraction Limit Features Contains over 1000 two color illustrations Includes over 120 comprehensive tables with properties of optical materials and light sources Emphasizes physical concepts over extensive mathematical derivations Chapters with summaries detailed index Delivers a wealth of up to date references *Fiber Lasers* Liang Dong,Bryce Samson,2016-09-19 The fiber laser with its humble beginning in the late 1980s has undergone tremendous development in the past decade or so transforming itself from a research curiosity to a major force in modern manufacturing Today it is revolutionizing our economy by fundamentally changing the way we mark machine and process materials on an industrial scale The recent development of high power fiber lasers is also fundamentally shaping a wide range of other areas from physical sciences and medicine to geology and space exploration In the past few years the tactical deployment of direct energy weapons based on fiber lasers has become a reality The development of fiber lasers is rooted in a number of technical areas including optical materials optical waveguide design nonlinear optics optical fiber fabrication and optical characterization in addition to optical fiber components and fiber laser design and architecture No comprehensive in depth coverage of such diverse topical areas has appeared in a single book Many important developments have taken place in the past decade in both academia and industry This book comprehensively covers the basics technology and applications of fiber lasers including up to date developments in both academia and industry and is aimed to serve as both an introduction and research aid for graduate students engineers and scientists who are new to this field and also for veterans in the field **NMR Methods for Characterization of Synthetic and Natural Polymers** Rongchun Zhang,Toshikazu Miyoshi,Pingchuan Sun,2019-07-29 Since the introduction of FT NMR spectroscopy

around five decades ago NMR has achieved significant advances in hardware and methodologies accompanied with the enhancement of spectral resolution and signal sensitivity Rapid developments in the polymers field mean that accurate and quantitative characterization of polymer structures and dynamics is the keystone for precisely regulating and controlling the physical and chemical properties of the polymer This book specifically focuses on NMR investigation of complex polymers for the polymer community as well as NMR spectroscopists and will push the development of both fields It covers the latest advances for example high field DNP and ultrafast MAS methodologies and show how these novel NMR methods characterize various synthetic and natural polymers
