Bremer, P.P. van der Werf, H.J.A. Röttgering, C.L. Carilli, 2012-12-06 Recent years have seen increasing evidence that the main epoch of galaxy formation in the universe may be directly accessible to observation Angular fluctuations in the background relict radiation have been detected by various ground based instruments as well as by the COBE satellite and suggest that the epoch of galaxy formation was not so very early Combined optical and radio studies have found galaxies at redshifts above 2 0 systems that at least superficially show the characteristics expected of large galaxies seen only shortly after their formation And absorption lines in the spectra of quasars seem to be telling us that most cold gas at early to intermediate cosmological epochs was in clouds having roughly galaxy sized masses What kinds of new observations will best help us study this high redshift universe in future What new instruments will be needed These are questions that loom large in the minds of the Dutch astronomical community as we celebrate 25 years of operation of the Westerbork Synthesis Radio Telescope Celebration of this Silver Jubilee has included a birthday party on 23 June 1995 a commemorative volume looking at both the history and the future of the facility The Westerbork Observatory Continuing Adventure in Radio Astronomy Kluwer 1996 and an international workshop held in the village of Hoogeveen on 28 30 August 1995 *Proceedings of the IRE.* Institute of Radio Engineers, 1962 *University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Authors & titles* University of California (System). Iben, Alvio Renzini, 2012-12-06 In recent years it has become clear that the red giant phase is one of the most dramatic periods in a star's life when all of its parts become involved in ways that have both direct and indirect observational consequences This is most particularly true of low and intermediate mass stars during the second ascent of the giant branch Such stars bring to their surfaces products of nucleosynthesis currently taking place in their deep interiors they pulsate as Mira variables develop extended outward flowing atmospheres that may exhibit maser properties and shed great quantities of matter sometimes highly processed into the interstellar medium The manner in which processed matter is brought to the surface is far from being completely explained and the precise mechanism or mechanisms whereby matter is ejected from the stellar surface whether by deposition of Alfvén waves radiation pressure on grains or as a consequence of some large scale envelope instability has yet to be elucidated to everyone's satisfaction The purpose of the second workshop in Astrophysics organized by the Advanced School of Astronomy was to bring together experts on all the physical processes occurring in red giants in an effort to emphasize the interrelatedness of these individual processes and to encourage a dialogue among experts that might serve to initiate a synthesis or at least sharpen our understanding of the most important problems to address in the future University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Subjects University of California (System).
