Radioactive Fallout After Nuclear Explosions And Accidents:

Radioactive Fallout after Nuclear Explosions and Accidents Y.A. Izrael, 2002-06-20 To achieve successful solutions to the problems resulting from local distant and global radioactive fallout after nuclear explosions and accidents and to achieve successful retrospective analyses of the radiation conditions from recent observations certain information is needed the distribution of the exposure dose rate in the atmosphere and in a country the distribution of radionuclides in natural environments and the nuclide composition of the radioactive fallout the features of formation of the aerosol particle carriers of the radioactivity and of the nuclide distribution of the particles of different sizes formed under different conditions the processes involved in the migration of radioactive products in different zones and environments the external and internal effects of nuclear radiation on human beings This monograph is devoted to a number of these problems namely to studies of the radioactive fallout composition the formation of the aerosol particles that transport the radioactive products and to the analysis of the external radiation doses resulting from nuclear explosions and or accidents Problems of restoration and rehabilitation of contaminated land areas are also touched upon in the monograph To solve such problems one requires knowledge of the mobility of radionuclides an understanding of their uptake by plants their transportation within the food chain and finally their uptake by animal and or human organisms The results of many years of study of radioactive fallout from atmospheric and underground nuclear explosions and accidents are summarized in this book It is intended for various specialists geophysicists ecologists health experts and inspectors as well as those who are concerned with radioactive contamination of natural environments

about recent and novel developments in the field *The Radiation Legacy of the Soviet Nuclear Complex* Nikolai N. Egorov, Vladimir M. Novikov, Frank L. Parker, Victor K. Popov, 2014-04-08 A study of the legacy of nuclear contamination in the Soviet Union It gives the location and characteristics of the accumulated radioactive material and wastes by each sector from ore and mining to use and disposal It describes types of storage capacity and utilization age and location It gives information on the territories and locations contaminated by normal operations and by accidents from which strategic plans for remediation can be formulated Global Studies Directory, 2017-10-02 Publication of the Global Studies Directory represents an unprecedented project in world practice Based on the professional assessment by a large international team of experts the Directory offers information on the most well known scholars political and public figures who have made outstanding contributions to the establishment and development of global studies or made a fundamental impact on the formation of global world The Directory also contains comprehensive information about organizations periodicals and special literature of direct relevance to the theory and practice of globalization and fully demonstrates the state of affairs in the field of study on a global level This project is a continuation of many years of research which first resulted in the publication of the Global Studies Encyclopedic Dictionary the companion publication to the Directory Radiation Exposure and Occupational Risks Eberhard Scherer, Christian Streffer, Klaus-Rüdiger Trott, 2012-12-06 The aim of radiation protection standards is to make the radiation workplace as safe as is humanly possible The gradual evolution over the last 20 years has been towards a more precise definition of the limits for occupational exposure These have been created not only in terms of short term effects but also more importantly in terms of long term risks involving such problems as the potential for carcinogenesis and genetic change In the United States the National Committee for Radiation Protection has recommended that 5 rems 50 mSv should remain as the maximum permissible dose equivalent for total body exposure This would represent the sum of internal and external exposure and should be regarded as the upper limit allowed The community of radiation users is required to conduct its operations in such a manner that the absolute value of the individual's dose equivalent in rems does not exceed his age in years There should be additional limits for tissues and organs based on short term effects Therefore individual organs are limited to dose equivalents low enough to ensure that the dose threshold values are not exceeded **Analysis of Environmental Radionuclides** Pavel P. Povinec, 2011-07-28 The purpose of this book is to present a state of art summary of current knowledge of methods of assessment of radionuclides in the terrestrial and marine environments It covers the traditional methods of radioactivity measurements such as radiometrics techniques but also recent developments in the mass spectrometry sector The book starts with a short preface introducing the subject of the book summarising content and philosophy of the book as well as the most important historical achievements The scientific topics are introduced by description of sampling methods optimisation of sampling sites and sampling frequency The recent developments in radiochemical separation methods using chromatography resins for the treatment of actinides transuranics and other groups

of radioelements are also described No other book is available covering all aspects of environmental radioactivity measurements although remarkable progress has been made in detection techniques over the last ten years At present the new methods enable to carry out investigations which were not possible before either because of lack of sensitivity or because of the fact that they required too large samples Nuclear Test Explosions, Scope 59 International Council for Science,2000-04-14 Nuclear Test Explosions Environmental and Human Impacts Edited by Sir Frederick Warner University of Essex UK and Rene J C University of Liege Belgium Nuclear Test Explosions summarises the findings of the international project SCOPE RADTEST Scientific Committee on Problems of the Environment RADiation from nuclear TEST explosions on the environmental and human impacts of nuclear tests The location and dates of 730 explosions and the 2419 tests performed between 1945 and 1998 are given followed by discussion of their effects The nuclear test sites include Nevada Semipalatinsk Novaya Zemlya South Pacific Australia and Lob Nor The fallout from 541 atmospheric tests and effects on human health and environment are assessed and the development of nuclear weapons is described The contents of the book have been assembled by a team of experts and should greatly assist in the discussion of weapons limitation **Radiation Legacy of the 20th Century** ,2002 **Monthly Catalog of United States Government Publications** , Energy Research Abstracts ,1989 **Military Nuclear Accidents** Jean-Claude Amiard,2018-11-26 The use of atomic energy for military purposes has given rise to a variety of nuclear accidents from the outset This applies to all levels of use from the manufacture of weapons to their commissioning This book provides an overview of the potential impact of such accidents The prospective consequences of local and global nuclear war are detailed Similarly for each accident the environmental ecological health and socio economic consequences are reviewed The contamination of the environment and its fauna and flora is detailed and the effects of ionizing radiation are reported The same is provided for human populations and the adverse effects on the health and physical and mental states of the populations concerned The economic cost of accidents is also evaluated The research presented in this book is based on scientifically recognized publications and reports from the military forces of the various countries concerned and from the national and international organizations competent in this field IAEA WHO UNSCEAR IRSN ICPR etc **Nuclear Science Abstracts** ,1974-07 **Disaster Preparedness Against Accidents Or Terrorist Attack** P. The Pandora Principle Norbert Georg Schwarz,2019-09-23 Growth is commonly regarded as something positive as something to be rewarded At the same time the growth of the global population and economy leads to depletion of resources violent competition and consequently to the impairment of the quality of life on earth Science has opened innumerable

Pandora boxes and humankind has no option but to live with the consequences Once any item of knowledge has entered the world it is practically impossible to remove it from the world We could do away with all weapons of mass destruction but still could not remove the fundamental ability of humans to construct such weapons Progress is always accompanied by destruction Where cities grow nature must give way when a new technology arises it pushes aside older technologies and where one group of humans appropriates resources it deprives another group of humans of them The discovery of fossil fuels as energy resource around 250 years ago has allowed for tremendous growth and progress in a very short time span If the current CO₂ emissions continue the atmospheric CO₂ concentrations will reach concentrations that negatively affect cognitive functions within the lifetime of our children and reach lethal concentrations within a few generations Methane is a 25 times more potent greenhouse gas than CO₂ and might apart from human economic activities be released in large amounts from melting permafrost areas of the earth With melting of polar ice shields global warming will accelerate as sun energy that previously was reflected through the albedo effect gets saved in the oceans With depletion of resources we think of resources to keep up our civilisation such as oil and gas However we also have to consider the depletion of resources essential for the pure survival of human beings such as water While human populations grow exponentially ground water levels shrink nearly everywhere If we are not facing near term human extinction we will at least face enormous challenges in the coming years with potential mass dying in some regions of the world most of them probably in poor developing countries of the tropics The creative power of destruction is the destructive power of creation
