Catheter Ablation Liong Bing Liem, Eugene Downar, 2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy rate in curing supraventricular tachycardia involving an accessory pathway or dual atrioventricular

nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory. However, conventional RF ablation has several well known limitations, most notably its ability to only produce relatively small point lesions, rendering it effective only for an arrhythmia with a small and/or a superficial target. It was soon recognized that the technology would not likely have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia. Indeed, the application of conventional RF technology in these complex but common arrhythmias has yielded unsatisfactory results.

Image-guided Therapy Systems Shahram Vaezy, Vesna Zderic, 2009 This title provides a global survey of the rapidly growing field of image guided therapy. You find detailed coverage of a wide range of key topics from MRI guided surgery, robotic cardiac surgery and brachytherapy and hyperthermia for cancer treatment to modern procedures in neurosurgery, laser cosmetic therapy and ultrasound guided high intensity focused ultrasound therapy for non-invasive tumor treatment. You learn the fundamentals of imaging and therapeutic modalities and their capabilities and constraints in implementation of image guided therapy systems.
