How Inventors Can Aid National Defense, 1941 [Inventors and Inventions](#) Alvin K. Benson, 2010

This work features in-depth critical essays on important men and women inventors of all time from around the world. Plus free online access to the full content of this remarkable reference set is available. The printed reference includes four volumes including 2,048 pages, 409 essays and 409 sidebars, hundreds of photos, illustrations and graphs, and appendixes, indexes, and resource listings. Features of the online subscription include fully supported complimentary online access, unlimited users at your library, full access from home or dorm room, immediate access via online registration, a simple intuitive interface, user profile areas for students and patrons, sophisticated search functions, complete content including appendixes, and fully illustrated Great Lives from History. *Inventors and Inventions* features 409 essays covering 413 individual inventors, including 27 women from all time worldwide. All essays were written specifically for this new publication. The editors have included in this set those inventors recognized for shaping modern technology and the way we live today, coverage that is essential in any liberal arts curriculum. The editor's criteria for including these individuals in this publication took into account their fame as inventors, the significance of their inventions, the amount of time they spent inventing, their representation of world inventors, their relevance to class curricula, and their interest to high school, undergraduate, and general readers. For purposes of this publication, the term invention was defined to include not only mechanical and other physical devices but also processes, e.g., the Bessemer process for making steel, software such as Grace Hopper's invention of COBOL, and systems such as those applied to business management. Pure scientific theories such as laws of physics were excluded, although rare exceptions were made for such systems and tools that have had a comprehensive influence on our way of interacting with the world, such as Aristotle's invention of the first system of biological taxonomy, Newton's creation of the calculus, and Einstein's theories of relativity.

Written by internationally known experts in the field Stereotactic Radiosurgery and Stereotactic Body Radiation Therapy examines one of the fastest developing subspecialties within radiation oncology These procedures deliver large doses of radiation in one to five sessions to a precisely determined target Often these techniques have proven to be as or more effective than traditional radiation therapy techniques while at the same time being cost efficient and convenient for the patient These techniques however require careful planning specialized equipment and well trained staff This volume provides a cutting edge look at the biological and technical underpinnings of SRS and SBRT techniques It includes a history of the development of SRS and SBRT clinical applications of the techniques dedicated devices for delivering precisely shaped high doses of radiation use of in room imaging for treatment planning and treatment guidance immobilization techniques for accurate targeting and future developments that will continue to evolve and refine existing techniques A valuable introduction to those just learning about these specialized techniques and an ideal reference for those who are already implementing them this book covers a wide variety of topics with clear discussions of each aspect of the technology employed

Cardiac PET and PET/CT Imaging

Marcello F. Di Carli, Martin J. Lipton, 2007-12-05 When the history of medicine in the latter half of the twentieth century is written the advances in cardiovascular diagnosis therapy and prevention will stand out as one of the most important achievements Although the age corrected death rate secondary to coronary artery disease has declined substantially in industrialized nations during this period the prevalence of these conditions remains stubbornly high because of the aging of the population Importantly the incidence of coronary events and of one of their most important sequelae heart failure is rising alarmingly in the developing world When viewed from a global perspective cardiovascular disease is assuming a

progressively greater importance and it is estimated that by 2025 it will be for the first time in human history the most common cause of death. Clearly rather than resting on the laurels of our achievements an intensification of the battle against cardiovascular disease must now be undertaken. Cardiovascular imaging will without question play a critical role in this battle. The appropriate selection of therapeutic measures be they pharmacologic catheter based surgical alterations in lifestyles or some combination of these depends on accurate assessments of both cardiac structure and function. Increasingly the changes that dictate management are quite subtle and require a level of precision that was not available to clinicians heretofore.
