Sedimentation Arved J. Raudkivi, 2020-08-26 This monograph provides the practising engineer with a concise overview of the methods of water diversion and exclusion or removal of sediment from the diverted water The emphasis is on flow features and the associated conveyance of sediments **Silting and Desilting of Reservoirs** Dan G. Batuca, J.M. Jordaan Jr, 2021-06-30 The creation of river dams and the storage of water have been a strategy for survival for many centuries Reservoirs have diverse functions providing irrigation water supply storage of water flood control navigation and power generation The silting of a reservoir is an unavoidable process Although it cannot be halted silting can be slowed down and controlled by a variety of soil conservation practices and by modifying agricultural practices in the catchment area Other methods of reducing silting include the placing of certain engineering structures in the river system and the introduction of adequate strategies of reservoir operation Silting and Desilting of Reservoirs includes aspects such as hydraulics sediment transport silting sediment distribution calculation and prediction of silting and solutions to reservoir silting *Mechanics of Sediment Transportation and Alluvial Stream Problems* R. J. Garde, K. G. Ranga Raju, 2000 The Third Edition Of This Book Recognises Two Important Developments That Have Taken Place In Recent Years 1 Mathematical Modelling Of Alluvial River Processes And 2 Environmental Aspects Relating To Sedimentation Both Of These Factors Have Been Duly Considered In This Edition With Its Detailed Analysis And Clear Presentation This Book Would Be Extremely Useful For Practising Civil Engineers It Would Also Serve As An Authoritative Reference Source For Graduate And Senior Undergraduate Civil Engineering Students *Dams and Reservoirs under Changing Challenges* Anton J. Schleiss, Robert M. Boes, 2011-05-18 In the past boundary conditions in the building of dams have changed as technological developments have been influential on dam planning construction operation and maintenance processes It is ICOLD s mission to not only consider these developments but also adequately deal with environmental aspects and related infrastructure issues Altered wa

Meeting, 1995 **Flooding and Management of Large Fluvial Lowlands** Paul F. Hudson, 2021-11-25 Pressure on large fluvial lowlands has increased tremendously during the past twenty years because of flood control urbanization and increased dependence upon floodplains and deltas for food production This book examines human impacts on lowland rivers and discusses how these changes affect different types of riverine environments and flood processes Surveying a global range of large rivers it provides a primary focus on the lower Rhine River in the Netherlands and the Lower Mississippi River in Louisiana A particular focus of the book is on geo engineering which is described in a straight forward writing style that is accessible to a broad audience of advanced students researchers and practitioners in

global environmental change fluvial geomorphology and sedimentology and flood and water management **Reservoir Sedimentation** Kumkum Bhattacharyya, Vijay P. Singh, 2019-01-03 Reservoir Sedimentation Assessment and Environmental Controls appraises the issues of sedimentation in reservoirs and discusses measures that can be employed for the effective management of sediment to prolong the operational life of reservoirs It provides information for professional consultants and policymakers to enable them to manage dams in the best possible way in order to ensure their sustainability as well as the sustainability of water resources in general It examines the effects of anthropogenic intervention and management of sediment in dams and reservoirs as water resources become more sensitive and the demand for clean water continues to increase Features Examines the issue of sedimentation in dams and reservoirs and presents water management strategies to alleviate environmental issues Presents methods to help ensure the environmental sustainability of dams and reservoirs as well as the sustainability of water resources with consideration of climate change and increased demand Illustrates the spatial distribution of sedimentation characteristics for several dams using geographic information systems GIS Explains the relationships between loss in capacity and catchment characteristics Examines regional variation in sediment yield defines geomorphic regions on the basis of similar hydrometeorology physiography geology and vegetation affecting reservoirs

Jain, V.P. Singh, 2003-09-12 This book is divided into four parts The first part Preliminaries begins by introducing the basic theme of the book It provides an overview of the current status of water resources utilization the likely scenario of future demands and advantages and disadvantages of systems techniques An understanding of how the hydrological data are measured and processed is important before undertaking any analysis The discussion is extended to emerging techniques such as Remote Sensing GIS Artificial Neural Networks and Expert Systems The statistical tools for data analysis including commonly used probability

distributions parameter estimation regression and correlation frequency analysis and time series analysis are discussed in a separate chapter Part 2 Decision Making is a bouquet of techniques organized in 4 chapters After discussing optimization and simulation the techniques of economic analysis are covered Recently environmental and social aspects and rehabilitation and resettlement of project affected people have come to occupy a central stage in water resources management and any good book is incomplete unless these topics are adequately covered The concept of rational decision making along with risk reliability and uncertainty aspects form subject matter of a chapter With these analytical tools the practitioner is well equipped to take a rational decision for water resources utilization Part 3 deals with Water Resources Planning and Development This part discusses the concepts of planning the planning process integrated planning public involvement and reservoir sizing The last part focuses on Systems Operation and Management After a resource is developed it is essential to manage it in the best possible way Many dams around the world are losing some storage capacity every year due to sedimentation and therefore the assessment and management of reservoir sedimentation is described in details No analysis of water resources systems is complete without consideration of water quality A river basin is the natural unit in which water occurs The final chapter discusses various issues related to holistic management of a river basin
