Of Fears and Foes Jose V. Ciprut, 2001-09-30 At the end of the deadliest century known to mankind the world still finds itself mired in bloodshed In addition to formal inter state conflict we see an increase in other forms of organized violence including ethnic warfare terrorism civil conflict and internationally necessitated police actions Cornered by these powerful global forces nation states continue their quest for security Theirs is a search plagued by futility since the very meaning of the word security is being eroded by the pace and tenor of change in an evolving international environment more complex and confusing than ever The explanatory power of traditional notions of international security which has provided a cornerstone for international relations theory as a whole seems increasingly inadequate in helping to understand the makings of global security A novel approach is needed one that integrates discerning insights from the study of language history geography religion economics and technology with more traditional understandings of the workings of power on an international level and on an intranational scale Of Fears and Foes presents just this kind of innovative thinking by some of the most creative scholars working on these issues today Ciprut invites us to consider a fundamental reassessment of what constitutes security and insecurity in an emerging global environment

Irreversible Time Physics Igor Taganov, 2020-03-06 In modern science including theoretical physics as in the early classical mechanics the unnatural reversible time of Newton based on the medieval concept of geometric time by Nicholas Oresme is still used This original sin of natural sciences has unintended consequences and creates a set of paradoxes and methodological problems for science The book explores two new models of essentially irreversible time decelerating

cosmological time and irreversible discrete time of a microcosm It discusses recent astronomical observations that reveal evidence of the cosmological deceleration of the pace of time in the distant cosmos in the solar system and on earth The structure of the model of irreversible discrete time of a microcosm as considered in the book allows for the existence of both time and anti time In particular the model predicts new uncertainty relations and violation of the mirror symmetry of the integral internal parity of the entire population of micro particles that correspond to current studies of elementary particle physics *Energy Research Abstracts* ,1981 Irreversible Quantum Dynamics Fabio Benatti,Roberto Floreanini,2008-01-11 The idea of editing the present volume in the Lecture Notes in Physics series arose while organizing the Conference on Irreversible Quantum Dynamics that took place at The Abdus Salam International Center for Theoretical Physics Trieste Italy from July 29 to August 2 2002 The aim of the Conference was to bring together different groups of researchers whose interests and pursuits involve irreversibility and time asymmetry in quantum mechanics The Conference promoted open and in depth exchanges of different points of view concerning both the content and character of quantum irreversibility and the methodologies used to study it The following main themes were addressed Theoretical Aspects of Quantum Irreversible Dynamics Open Quantum Systems and Applications Foundational Aspects of Irreversible Quantum Dynamics Asymmetric Time Evolution and Resonances Each theme was reviewed by an expert in the field accompanied by more specific research like shorter talks The whole topic of quantum irreversibility in all its manifold aspects has always raised a lot of interest starting with the description of unstable systems in quantum mechanics and the issue of quantum measurement Further in recent years a boost of activity concerning noise dissipation and open systems has been prompted by the fast developing field of quantum communication and information theory These considerations motivated the editors to put together a volume that tries to summarize the present day status of the research in the field with the aim of providing the reader with an accessible and exhaustive introduction to it **The Statistical Mechanics of Irreversible Phenomena** Pierre Gaspard,2022-07-28 A comprehensive overview of recent progress in nonequilibrium statistical mechanics including applications across a range of disciplines Dynamical Systems and Irreversibility Ioannis Antoniou,2003-10-03 Leading research perspectives and analysis of dynamical systems and irreversibility Edited by Nobel Prize winner Ilya Prigogine and renowned authority Stuart A Rice the Advances in Chemical Physics series provides a forum for critical authoritative evaluations in every area of the discipline In a format that encourages the expression of individual points of view experts in the field present comprehensive analyses of subjects of interest Volume 122 collects papers from the XXI Solvay Conference on Physics dedicated to the exploration of Dynamical Systems and Irreversibility Ioannis Antoniou Deputy Director of the International Solvay Institutes for Physics and Chemistry edits and assembles this cutting edge research including articles such as Non Markovian Effects in the Standard Map Harmonic Analysis of Unstable Systems Age and Age Fluctuations in an Unstable Quantum System and discussion of many more subjects Advances in Chemical Physics remains the premier venue
