Resonating Bodies:

Resonating Bodies Lynne Alexander, 1989 *Resonating Bodies* Alexander, Nina, Lynne Alexander, 1993-02-01 *Music and the Forms of Life* Lawrence Kramer, 2022-10-04

Inventors in the age of the Enlightenment created lifelike androids capable of playing music on real instruments. Music and the Forms of Life examines the link between such simulated life and music which began in the era's scientific literature and extended into a series of famous musical works by Haydn, Mozart, and Beethoven. Music invented auditory metaphors for the scientific elements of life: drive, pulse, sensibility, irritability, even metabolism. It investigated the affinities and antagonisms between life and mechanism and explored questions of whether and how mechanisms can come to life. The resulting changes in the conceptions of both life and music had wide cultural resonance at the time, and those concepts continued to evolve long after. A critical part of that evolution was a nineteenth-century shift in focus from moving androids to the projection of life in motion, culminating in the invention of cinema. Weaving together cultural and musical practices, Lawrence Kramer traces these developments through a collection of case studies ranging from classical symphonies to modernist projections of waltzing specters by Mahler and Ravel to a novel linking Bach's Goldberg Variations to the genetic code.

Leibniz's Correspondence in Science, Technology and Medicine (1676 -1701) James O'Hara, 2024-07-29

Leibniz's correspondence from his years spent in Paris, 1672-1676, reflects his growth to mathematical maturity, whereas that from the years 1676-1701 reveals his growth to maturity in science, technology, and medicine in the course of which more than 2000 letters were exchanged with more than 200 correspondents. The remaining years until his death in 1716 witnessed above all the appearance of his major philosophical works. The focus of the present work is Leibniz's middle period, and the core themes and core texts from his multilingual correspondence are presented in English from the following subject areas: mathematics, natural philosophy, physics, and cosmology; power technology, including mining and transport engineering; and engineering science projects, scientific, technological, and economic projects, alchemy, and chemistry, geology, biology, and medicine.

Traditions of Analysis and

Synthesis William R. Newman, Jutta Schickore, 2024-12-23 This open access book provides a fresh perspective on analysis and synthesis across several areas of inquiry The two operations form a primary basis of modern laboratory science ranging from the spectrographic analysis used in practically every scientific discipline today to the naming of entire disciplines such as synthetic organic chemistry Despite their acknowledged significance however the history of analysis synthesis and their relations over the longue dur e is poorly understood Several volumes have been devoted to the history of analysis and synthesis in the sense that premodern mathematicians and philosophers used the terms but very little work has been done on the tradition of material decomposition and recomposition and its relationship to mathematics and philosophy The present volume brings together scholars in the history of medicine mathematics philosophy chemistry and alchemy to explore the ways in which these multiple disciplines understood and used analysis and synthesis as experimental justificatory and conceptual tools

Musicality in Theatre David Roesner, 2016-04-29 As the complicated relationship between music and theatre has evolved and changed in the modern and postmodern periods music has continued to be immensely influential in key developments of theatrical practices In this study of musicality in the theatre David Roesner offers a revised view of the nature of the relationship The new perspective results from two shifts in focus on the one hand Roesner concentrates in particular on theatre making that is the creation processes of theatre and on the other he traces a notion of musicality in the historical and contemporary discourses as driver of theatrical innovation and aesthetic dispositif focusing on musical qualities metaphors and principles derived from a wide range of genres Roesner looks in particular at the ways in which those who attempted to experiment with advance or even revolutionize theatre often sought to use and integrate a sense of musicality in training and directing processes and in performances His study reveals both the continuous changes in the understanding of music as model method and metaphor for the theatre and how different notions of music had a vital impact on theatrical innovation in the past 150 years Musicality thus becomes a complementary concept to theatricality helping to highlight what is germane to an art form as well as to explain its traction in other art forms and areas of life The theoretical scope of the book is developed from a wide range of case studies some of which are re readings of the classics of theatre history Appia Meyerhold Artaud Beckett while others introduce or rediscover less discussed
