Higher Education, 1981 Resource Use in Higher Education June O'Neill, 1971 *Resource Allocation in Higher Education* William F. Massy, 1996 Offers guidance for implementing reforms in the allocation of resources in colleges and universities **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1973 The Economics of Higher Education in the United States Thomas Adam, Ayten Burcu Bayram, 2019-03-27 In *The Economics of Higher Education in the United States* editors Thomas Adam and A Burcu Bayram have assembled five essays adapted from the fifty second annual Walter Prescott Webb Memorial Lecture Series that focus on the increasing cost of college a topic that causes great anxiety among students parents faculty administrators legislators and taxpayers Essays focus on the funding of colleges the funding of professional schools and the provision of scholarships and student loans for undergraduate students to reveal the impact of money on the structure of institutions of higher education and the organization of colleges The cost of higher education has risen dramatically as both states and the federal government have significantly lowered their contributions to offset that cost With rising tuition and cost of living on top of a growing student population too many graduates find themselves in financial trouble after earning their undergraduate degree Mounting student debt prevents an increasing number of young professionals from embarking on the very life for which their education was supposed to prepare them How have we come from a political environment in which higher education was perceived as a public good normally free to the user to an environment in which higher education is seen as a privilege subject primarily to market forces *The Economics of Higher Education in the United States* offers a desperately needed analysis in an attempt to understand and tackle this looming problem *Statewide Planning in Higher Education* D. Kent Halstead, 1974 This comprehensive handbook which emphasizes major planning problems and their solutions should enable administrators and others to enhance the professional skills they will need for the successful management and operation of statewide systems of higher learning National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1973 First multi year cumulation covers six years 1965-70 **Higher Education Planning** D. Gilmore, 1991 *The Academic System in American Society* Alain Touraine, 2017-11-30 Although the period of student protests of the 1960s and 1970s has long passed Alain Touraine argues in this wide ranging and vigorous essay that the period's problems remain with us Higher degrees have become less and less valuable on the labor market and the demand for academic reform has become more intense Community colleges still try to provide equal educational opportunities for the poor and the minorities without much success And the university has not yet resolved the conflict between being the home of impartial inquiry and research and serving constituent interests Touraine views American higher education as a system within a definite though changing social context He compares U S student movements with

those of other countries He is skeptical about the way Americans view the relationships between the university and what he regards as the ruling forces of the society between knowledge and power between production and education He offers no facile solutions but he presents an exciting nontraditional analysis of the social and political forces that have shaped the modern history of higher education In the new introduction Clark Kerr contrasts his own views as an American observer to those of Touraine as a French intellectual He asserts that the family not higher education is the most important school in the process of reproducing society Kerr places more emphasis than does Touraine on the labor market on the production functions training of skills and advancing technology of the vast nonelite segments of American higher education on the long term impacts of science in changing society and on scholarly criticism in affecting transformations and places less emphasis on sporadic political protests by faculty and students He agrees with Touraine however in his two great themes 1 that you cannot understand the academic system unless you first understand society and 2 that the rise of the university must be understood to understand modern society where knowledge is power This volume will be important to all those interested in higher education whether as participants or observers
