Respect For Nature A Theory Of Environmental Ethics:

Respect for Nature Paul W. Taylor, 1986 Respect for Nature defends a biocentric theory of environmental ethics Without making claims for the moral rights of plants and animals Paul Taylor offers a reasoned alternative to the prevailing anthropocentric view according to which the natural environment and its wild biotic communities are valued only as objects for human use or enjoyment *Respect for Nature* Paul W. Taylor, 1986 The Description for this book Respect for Nature A Theory of Environmental Ethics will be forthcoming **Respect for Nature** Paul W. Taylor, 2011-04-11 What rational justification is there for conceiving of all living things as possessing inherent worth In Respect for Nature Paul Taylor draws on biology moral philosophy and environmental science to defend a biocentric environmental ethic in which all life has value Without making claims for the moral rights of plants and animals he offers a reasoned alternative to the prevailing anthropocentric view that the natural environment and its wildlife are valued only as objects for human use or enjoyment Respect for Nature provides both a full account of the biological conditions for life human or otherwise and a comprehensive view of the complex relationship between human beings and the whole of nature This classic book remains a valuable resource for philosophers biologists and environmentalists alike along with all those who care about the future of life on Earth A new foreword by Dale Jamieson looks at how the original 1986 edition of Respect for Nature has shaped the study of environmental ethics and shows why the work remains relevant to debates today Environmental Ethics Gregory Bassham, 2020-12-04 Environmental Ethics provides an accessible lively and up to date introduction to the central issues and controversies in environmental ethics Requiring no previous knowledge of philosophy or ethical theory the book will be of interest to students environmental scientists environmental policy makers and anyone curious to know what philosophers are saying today about the urgent environmental challenges we face The book is divided into two parts Part One deals with theoretical issues in environmental philosophy examining a variety of ethical and environmental theories that provide diverse and thought provoking perspectives on critical ecological issues Part Two turns to applied environmental ethics addressing current debates on topics such as climate change biodiversity loss wilderness preservation responsibilities to future generations population growth overconsumption food ethics and ecological activism Features include Clear explanations of key concepts and theories that lie at the heart of current debates in environmental ethics A mix of theory of practice that permits readers to apply diverse theoretical perspectives to key environmental debates A wealth of pedagogical aids including chapter summaries discussion questions suggested readings and a glossary of important terms **The Intrinsic Value of Nature** Leena Vilkkä, 2021-11-15 What is intrinsic value What is the origin of value Are people always superior to nature This book is a philosophical analysis of the human relationship to the non human world It is a pioneering study of the philosophy of nature conservation in relation to the discussion of intrinsic value Vilkkä develops a naturalistic or naturocentric theory of value that is based on ethical extensionism and pluralism Vilkkä analyzes natural values and

environmental attitudes zoocentrism biocentrism and ecocentrism This book forms a taxonomy for nature having intrinsic value The theory of intrinsic value is based on naturocentric and naturogenic values The book questions the thesis of weak anthropocentrism that denies the existence of naturogenic values In Vilks's theory animals and nature are the origin of value She defends the existence of zoogenic and biogenic values in the non human world and discusses the possibility of ecogenic value nature as a whole having value independent of human or animal minds Vilks analyzes the goodness and rights of nature the problem of priorities and ecological humanism A naturocentric recommendation is that the well being of animals and nature should have priority over human values at least in some real decision contexts Ecological humanism recommends an attitude of respect for people animals and nature The book includes an extensive glossary index and bibliography

A Non-Philosophical Theory of Nature A. Smith, 2013-07-18 Utilizing Francois Laruelle's non philosophical method Smith constructs a unified theory of philosophical theology and ecology by challenging environmental philosophy and theology claiming that and engagement with scientific ecology can radically change the standard metaphysics of nature as well as ethical problems related to the natural

Placing Nature on the Borders of Religion, Philosophy and Ethics Dr Forrest Clingerman, Mr Mark H Dixon, 2013-06-28 The natural world has been humanized even areas thought to be wilderness bear the marks of human impact But this human impact is not simply physical At the emergence of the environmental movement the focus was on human effects on nature More recently however the complexity of the term nature has led to fruitful debates and the recognition of how human individuals and cultures interpret their environments This book furthers the dialogue on religion ethics and the environment by exploring three interrelated concepts to recreate to replace and to restore Through interdisciplinary dialogue the authors illuminate certain unique dimensions at the crossroads between finding value creating value and reflecting on one's place in the world Each of these terms has diverse religious ethical and scientific connotations Each converges on the ways in which humans both think about and act upon their surroundings And each radically questions the damaging conceptual divisions between nature and culture human and environment and scientific explanation and religious ethical understanding This book self consciously reflects on the intersections of environmental philosophy environmental theology and religion and ecology stressing the importance of how place interprets us and how we interpret place In addition to its contribution to environmental philosophy this work is a unique volume in its serious engagement with theology and religious studies on the issues of ecological restoration and the meaning of place

The Politics of Nature Andrew Dobson, Paul Lucardie, 2002-11 A balanced and comprehensive survey of current green political ideas their varying responses to fundamental problems in political theory and their relationships with other ideological traditions

Regarding Nature Andrew McLaughlin, 1993-01-01

McLaughlin philosophy City U of New York argues that industrialism is the cause of our current environmental crisis and that the solution requires a fundamental change in how we understand nature and humanity He reviews the capitalist socialist industrial and scientific views of nature the ideology of control anthropocentrism and other topics Paper edition unseen 16 95 Annotation copyright by Book News Inc Portland OR Character and Environment Ronald L. Sandler, 2009-05-22 In Character and Environment Ronald L Sandler brings together contemporary work on virtue ethics with contemporary work on environmental ethics He demonstrates the many ways that any ethic of character can and should be informed by environmental considerations He also develops a pluralistic virtue oriented environmental ethic that accommodates the richness and complexity of our relationship with the natural environment and provides effective and nuanced guidance on environmental issues Nature Alive Adam Scarfe, 2018-04-18 This volume pays homage to Alfred North Whitehead's 1861 1947 profound lecture and essay entitled Nature Alive which was one of his most mature expressions of his process relational metaphysics a holistic conceptual framework that renders vivid the dynamic character of the natural world and the intrinsic purposiveness selective agency and creativity of living organisms Inspired by but not beholden to Whitehead's process metaphysical lens the contributors to this volume bring a multiplicity of philosophical orientations to the table in challenging the mechanistic and reductionistic neo Darwinian paradigm that is still dominant today in the life sciences Mechanistic neo Darwinism views nature and living organisms as machines namely as networks of externally related and linear causal switches dials levers pulleys and gears that are at the ready for technological and biotechnological manipulation Seeking a conceptual framework and a language that are more adequate to the study of the natural world and of living creatures than the mechanistic orientation the contributors to this volume explore several of the New Frontiers of Biology which are areas of biology whose findings to some extent go beyond the explanatory confines of the Modern Synthesis of natural selection and genetics Most notably emergence theory the theory of organic selection epigenetics homeostasis chronobiology and autopoiesis research can provide us with key insights that can assist us in explaining how living agents emerged including the evolutionary origins of mentality consciousness and mind Moreover attention to the New Frontiers of Biology can serve to re-enchant our understanding of the natural world and to prevent ecological devastation through a restoration to objectivity of notions such as intrinsic purposiveness selective agency creativity and intrinsic value *Environmental Ethics* David R. Keller, 2010-03-15 Through a series of multidisciplinary readings *Environmental Ethics: The Big Questions* contextualizes environmental ethics within the history of Western intellectual tradition and traces the development of theory since the 1970s Includes an extended introduction that provides an historical and thematic introduction to the field of environmental ethics Features a selection of brief original essays on why to study environmental ethics by leaders in the field Contextualizes environmental ethics within the history of the Western intellectual tradition by exploring anthropocentric human centered and nonanthropocentric precedents Offers an interdisciplinary approach to the field by featuring seminal work from eminent

environmentalethics info **Green Ethics and Philosophy** Julie Newman,2011-06-28 Covers the moral relationship between humans and their natural environment specifically targeting the contemporary green movement **A Radical Green Political Theory** Alan Carter,2013-12-16 Original provocative and cutting edge Author is well respected and well networked Controversial and topical subject **Political Theory and the Environment** Matthew Humphrey,2020-04-22 This collection offers a sympathetic but critical perspective on contemporary ecological political theory and gives proposals for a reorientation of some of its key aspects **Nature and the Environment in Contemporary Religious Contexts** Thomas Donlin-Smith,Muhammad Shafiq,2018-06-11 This collection of essays discusses the human relationship with and responsibilities toward the natural environment from the perspective of religions and the social sciences The chapters examine a variety of conditions that have contributed to the contemporary environmental crisis including abuse of power economic greed industrialization deforestation and unplanned waste management They then discuss concepts from several different religious texts and traditions that promote environmental protection as a sacred moral duty for all humanity Religious concepts such as dharma duty toward Mother Earth tikkun Olam repair of the world khalifa people as deputies of God on earth amanah the universe as a trust in human hands and paticca samuppada dependent co arising are employed to argue that all the components of the biosphere are integral to the cosmos each piece with its own value and role in the harmony of the whole The book makes it clear that religions can become more green and play a helpful role in raising our ecological consciousness and supporting preservation of the environment into the future Duties Regarding Nature Toby Svoboda,2015-06-26 In this book Toby Svoboda develops and defends a Kantian environmental virtue ethic challenging the widely held view that Kant's moral philosophy has little to offer environmental ethics On the contrary Svoboda contends that on Kantian grounds there is good moral reason to care about non human organisms in their own right and to value their flourishing independently of human interests since doing so is constitutive of certain environmental virtues Svoboda argues that Kant's account of indirect duties regarding nature can ground a compelling environmental ethic the Kantian duty to develop morally virtuous dispositions strictly proscribes unnecessarily harming organisms and it also gives us moral reason to act in ways that benefit such organisms Svoboda's account engages the recent literature on environmental virtue including Rosalind Hursthouse Philip Cafaro Ronald Sandler Thomas Hill and Louke van Wensveen and provides an original argument for an environmental ethic firmly rooted in Kant's moral philosophy *A Theory of Environmental Leadership* Mark Manolopoulos,2021-03-15 In *A Theory of Environmental Leadership* Mark Manolopoulos draws on his original model of leadership outlined in his cutting edge book *Following Reason* to derive and develop the first properly systematic model of eco leadership Suppose humanity's relation with the Earth may be described in terms of leadership stages or modalities once

upon a time the Earth led or ruled humanity and now we humans rule or lead the Earth When the Earth led the Earth flourished now that humankind leads the Earth flounders ecological crises multiply and intensify However there might be a third stage or modality of leadership humanity leading for the Earth leading in a way that allows the world including humans to re flourish What would be the nature of this truly environmental form of leadership A Theory of Environmental Leadership identifies and critically analyzes the two basic and incompatible positions associated with the way we construe and interact with the non human anthropocentrism human supremacism and ecocentrism ecological egalitarianism By rigorously analyzing and leveraging this polarity this book outlines an innovative theory of eco leadership together with some of its confronting but necessary measures Expansive and incredibly timely A Theory of Environmental Leadership is ideal for a range of audiences from scholars and students of environmental leadership studies to activists and policymakers The book s remarkable clarity and engaging character also makes it suitable for the general public The Human Relationship to Nature Matthew R. Foster, 2016-11-02 Growing alarm over the harm done by humans to the natural world and even to the viability of our own industrial civilization compels us to ask the deeper moral question What should be the human relationship to nature Matthew R Foster starts by assessing three contrasting patterns of moral reasoning the Progress Ethic that created the world we live in the biblically inspired Stewardship Ethic and the Connection Ethic based on scientific understanding of the interdependence of all natural entities Critical analysis reveals that none of these ethics is able to sustain the values it advocates due to two unsupportable presumptions that the norms of human morality are commensurate with the natural world and that the value of an entity is an intrinsic property Foster argues that in order for a future environmental ethic to be both logically coherent and environmentally constructive it must start from unconventional notions First because nature will never be commensurate with human moral reasoning non rational resources must be employed despite the risks involved Second value resides in the relationship of one entity to another and does not belong intrinsically to either in short value is foremost a verb rather than a noun Foster proposes a new paradigm attentive to the realm of value relations among all natural entities one which offers mediating opportunities between nature and morality In this new ethic there are no shoulds Rather moral responsibilities to the natural entities around us are elective placing us in an unfamiliar yet potentially liberating network of relationships This book will be of interest to scholars both instructors and students of environmental ethics philosophy religion and intellectual history and all who are concerned about the environmental challenges of our time
