Asniar Pascayantri, S.Si., M.Si., Apt

### RESPIRATORY DISTRESS SYNDROME

- Major cause of morbidity and mortality in **preterm neonates**
- Pathophysiology → Pulmonary surfactant deficiency
- Causing respiratory failure → atelectasis (alveoli collapse ), hypoxemia, decreased lung compliance, small airway epithelial damage, and pulmonary edema.

Respiratory Distress Syndromes Kenneth L. Brigham,1990      Respiratory Distress Syndromes HarperCollins Canada, Limited,Zondervan,Zondervan Publishing,1990-01-01      **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1991      *Damage-Associated Molecular Patterns in Human Diseases* Walter Gottlieb Land,2023-03-10 The core of this three volume book deals with damage associated molecular patterns abbreviated DAMPs which are unique molecules that save life and fight for survival of all organisms on this planet by triggering robust inflammatory immune defense responses upon any injury including those caused by pathogens such as viruses and bacteria However these molecules also have a dark side when produced in excess upon severe insults they can trigger serious human diseases The three volumes present current understanding of the importance of DAMP promoted immune responses in the etiopathogenesis of human diseases and explore how this understanding is impacting diagnosis prognosis and future treatment This third volume addresses the potential of DAMPs in clinical practice as therapeutic targets and therapeutics by focusing on a description of antigen related diseases which are pathogenetically dominated by DAMPs that is infectious and autoimmune disorders and allograft rejection as an undesired function of these molecules as well as tumor rejection as the desired function of these molecules The book is written for professionals from all medical and paramedical disciplines who are interested in the introduction of innovative data from modern inflammation and immunity research into clinical practice In this sense the book reflects an approach to translational medicine The readership will include all practitioners and clinicians in particular ICU clinicians infectiologists microbiologists virologists hematologists rheumatologists diabetologists neurologists transplantologists oncologists and pharmacists Also available *Damage Associated Molecular Patterns in Human Diseases Vol 1 Injury Induced Innate Immune Responses* *Damage Associated Molecular Patterns in Human Diseases Vol 2 Danger Signals as Diagnostics Prognostics and Therapeutic Targets*      *The Cumulative Book Index* ,1999      *Molecular Biology of Acute Lung Injury* Hector R. Wong,Thomas Shanley,2012-12-06 Acute lung injury ALI impacts patient care in every ICU in the world Our collective understanding of this condition has grown immensely over the past decade but morbidity and mortality remain unacceptably high To enhance the understanding of clinicians and researchers this book addresses the pathophysiology of acute lung injury from a molecular and cellular standpoint includes animal models of acute lung injury and points to potential therapeutic advances based on scientific findings It is a concise compendium of the multiple pathways mechanisms and molecules involved in the pathophysiology of acute lung injury and is intended to help caregivers understand the process and thus care for patients more effectively      **Drugs and the Lung** C. P. Page,W. James Metzger,1994      **Molecular Insights Into Development In Humans: Studies In Normal Development And Birth Defects** Moyra Smith,2014-11-20 The aim and scope of this book is to review current information on human development and processes of differentiation that have

benefited from breakthrough analyses in stem cell biology elucidation of genome and gene architecture and aspects of regulation of gene expression analysis of signaling systems and transcription factor actions Insights into actions of specific genes and their roles in development have been gathered through studies in patients with specific birth defects including congenital malformations metabolic defects and functional impairments The book is organized into three sections the first dealing with aspects of genomics gene structure and regulation analysis of signaling and function of specific organelles The second section deals with molecular aspects of development of specific organs and structures such as bone face brain heart liver pancreas kidney The last section deals with specific malformations and tumors that provide insight into regulation of growth Environmental factors that impact growth and development are also covered *Acute Respiratory Distress*

Characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases, 2nd edition Chengjin Gao, Shuming Pan, Kun Xiong, 2024-11-06 The systemic inflammatory response is evident in inflammatory diseases and the immune system secretes many cytokines involved resulting in a robust immune response For example the pathogenesis of sepsis includes abnormal immune cell activation in the early stages as well as sepsis related immunosuppression During the immunosuppressive phase CD4 T cells CD8 T cells Th17 cells and d T cells are reduced while regulatory T cells increase At the same time T lymphocytes and neutrophils as immune effector cells interact with each other and play a key role in regulating the immune response to immune inflammatory diseases The increased release of neutrophil extracellular trap networks NETs by neutrophils leads to a significant upregulation of NETs DNA MPO which further aggravates the septic inflammatory response and organ functional impairment Therefore it is important to deeply investigate the characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases and targeting therapies against them may provide new ideas for the precise treatment of diseases The goal of this Research Topic is to provide a forum to advance research on the contribution of the fundamental mechanisms of immune system development and function with special emphasis on the description and mechanism of clinical immunological phenotypes in different immune disorders and the definition of their molecular basis The Research Topic had the bullet points including but not limited to the following 1 Description of the immune phenotypes of various common acute and chronic diseases 2 The regulatory mechanisms of different factors on the development and function of the host immune system 3 Inflammatory immunological mechanisms organ function and interorgan interactions **Respiratory Distress Syndrome**, 1979-08

positioning therapy in ARDS Recovery and Long term outcome in ARDS and Experimental models and emerging hypotheses for ALI and ARDS

**Molecular Mechanisms of Action of Functional Foods and Nutraceuticals for Chronic Diseases** Shima Abdollahi, Syam Mohan, Yashwant V. Pathak, 2023-04-19 There has been a global rise in the incidence of chronic illnesses which may be partially attributed to the lengthening of the average human lifespan. Functional foods and nutraceuticals have a potential role to play in the development and maintenance of health. They can assist the body in its battle against inflammation and chronic illnesses. *Molecular Mechanisms of Action of Functional Foods and Nutraceuticals for Chronic Diseases* addresses the effects and mechanism of functional foods in relation to chronic diseases such as obesity, cardiovascular diseases, diabetes, cancer, etc. This volume, like the first volume *Applications of Functional Foods and Nutraceuticals for Chronic Diseases*, inspires new thought processes and a paradigm shift in research and development. Key Features: Discusses the molecular mechanism of action; the range of toxicities exerted by these food components for functional foods for addressing chronic conditions; Enhances scientists and industrial personnel knowledge of functional foods and in the management of chronic diseases; Presents research on the role of functional foods/nutraceuticals in preventing and treating chronic diseases through epigenetic modulation; Explores various subjects such as epigenetics, immunological, metabolic, technological, and neurodegenerative aspects affected by functional foods in chronic diseases. The world's leading wellness centers for chronic diseases are using functional foods and nutraceuticals in their practice and discovering their useful applications, and this second of two volume sets is another great reference for practitioners, scientists, and clinicians in the management of chronic diseases. Contributors hail from different geographical locations around the world and have many years of research and scholarly experience in functional foods, nutraceuticals, and biology. Lung, 1976 *The American Review of Respiratory Disease*, 1993-07 Includes Abstracts section previously issued separately Acute Respiratory Distress Syndrome, An Issue of Critical Care Clinics, E-Book Michael Matthay, Kathleen Dori Liu, 2021-09-22 This issue of *Critical Care Clinics* guest edited by Drs Michael Matthay and Kathleen Dori Lui focuses on Acute Respiratory Distress Syndrome. This is one of four issues each year selected by the series consulting editor Dr John Kellum. Articles in this issue include but are not limited to: Epidemiology; Environmental Factors; Clinical Diagnosis; Physiology of ARDS including COVID 19; Pathogenesis Based on Clinical Studies; Genetics of ARDS; Ventilator Management and Rescue Therapy with ECMO; Acute Kidney Injury and ARDS; Pharmacologic Therapies and ARDS; and Long Term Outcomes from ARDS. Provides in-depth clinical reviews on ARDS providing actionable insights for clinical practice. Presents the latest information on this timely focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create these timely topic-based reviews. **Clinical, Biological and Molecular Aspects of COVID-19** Paul C. Guest, 2021-03-03 The novel coronavirus 2019 COVID 19 has caused a serious global pandemic in just eight months. Nearly every country and territory in the world has been affected by the virus. The virulence and infection rate of the virus are

profound and has required extreme social distancing measures across the globe in order to prevent overwhelming the healthcare services and hospitals COVID 19 appears to have the greatest effects on elderly individuals and those who have co morbid diseases such as heart disease asthma and diabetes As the peak begins to slow in many countries the death rates remain high amidst justified fears of a second wave A rapid worldwide mobilization has begun to identify effective treatments and develop vaccines This new volume will increase readers understanding of the ongoing COVID 19 pandemic through a series of chapters that address these concerns Leading experts will discuss the effects of the virus in cases of co morbidities new treatment approaches mental health aspects of the pandemic and convey the results of survey studies The book will be an excellent resource for researchers studying virology metabolic diseases respiratory disorders and clinical scientists physicians drug companies and healthcare services and workers

*Research Awards Index*, 1989 Molecular and Cellular Basis of Inflammation Charles N. Serhan, Peter A. Ward, 1998-12-09 The study of inflammation has captured the interest of scholars since the earliest recorded history Symbols identifying the cardinal signs of inflammation were uncovered in both Sanskrit and hieroglyphics 1 Since complete appreciation of the inflammatory process is underscored by the need for knowledge at both the cellular and molecular levels academic inquiry in the area of inflammation has led in many respects the foray of current biomedical research Molecular and Cellular Basis of Inflammation represents research from the cutting edge in the broad view of inflammation The chapters are written by experts with a multidisciplinary approach to the study of inflammatory and cellular processes and thus include contributions from the fields of molecular biology biochemistry pharmacology immunology and pathobiology Molecular and Cellular Basis of Inflammation was first conceived during a mini symposium sponsored by the American Society for Investigative Pathology held at FASEB in 1995 entitled The Role of Reactive Lipids Oxygen and Nitrogen Metabolites in Inflammation at which several of the contributing authors delivered lectures This present much extended volume includes leading front descriptions of both protein and lipid mediators The chapter devoted to the complement cascade by Ward and colleagues as well as Chapters 3 7 and 13 provide up to date descriptions of the biosynthesis molecular biology chemistry and actions of both protein and lipid mediators
