This study examines the extent to which the theories of exchange, cognitive dissonance, self-perception and commitment/involvement, when used to design surveys, can influence potential respondents to participate in a survey. The results from an experiment involving a total of 403 subjects in Hong Kong and Australia expands what is known about the role played by theory by examining consumer responses to participation requests made on the basis of each theoretical framework. Specific results support the relatively high positive impact of two of the frameworks that has been reported in a study of research practitioners.

INTRODUCTION

There is very little known about the reasons why some people participate as respondents in a survey while others do not, and among respondents why the quality of data varies. A great number of empirical studies have been conducted on response inducement techniques and other methodological artifacts that affect response to surveys, particularly mail surveys. Of concern in these studies have been the effects of such devices as preliminary notification, foot-in-the-door technique, follow-ups, questionnaire format and length, survey source or sponsorship, nature of return envelopes, type of postage, personalisation, cover letters, anonymity, deadline date, and premiums and rewards. Quantitative (i.e., meta-analysis) and qualitative reviews of a large number of studies relating to mail surveys have been written by Scott (1961), Blumberg, Fuller & Hare (1974), Kanuk & Berenson (1975), Linsky (1975), Houston & Ford (1976), Heberlein & Baumgartner (1978), Duncan (1979), Fox, Crask & Kim (1988), Yammarino, Skinner & Childers (1991) and Church (1993). Reviews by Peterson & Kerin (1981) and by Yu & Cooper (1983) included all major methods of survey data collection, as did the quantitative review of response effects to interviews by Sudman & Bradburn (1974). The consensus of all this research is that there is no strong empirical evidence that any technique or aspect of a technique is always best at inducing response, except, perhaps for pre-notification, follow-ups and the use of a monetary incentive, particularly one that is sent with the request for participation. Typically a study has used one or more of the following as a dependent variable or measure of effect: response rate, item omissions, response speed, cost and in a much more limited

Handbook of Interview Research Jaber F. Gubrium, James A. Holstein, 2002 The Handbook of Interview Research is the most ambitious attempt yet at examining the place of the interview in contemporary society Interviewing is the predominant mode of research in the social sciences It is also the stock in trade of information seekers in organizations and institutions of all kinds as well as in the mass media Across the board interviews provide today's leading window on the world of experience The Handbook offers a comprehensive examination of the interview at the cutting edge of information technology Drawing upon leading experts from a wide range of professional disciplines this book addresses conceptual and technical challenges that confront both academic researchers and interviewers with more applied goals From interview theory to the nuts and bolts of the interview process the coverage is impressively broad and authoritative The Handbook of Interview Research is both encyclopedic and thematic As an encyclopedia it provides extensive discussions of the methodological issues now surrounding interview practice offering a multi faceted assessment of what has become the method of choice for obtaining personal information in today's society But the Handbook also is a story which spins a particular tale of interviewing one that moves from the commonly recognized individual interview to what is called the interview society The gist of the presentation is that we can no longer regard the interview as simply an instrument for gathering data but must now also view it an integral part of society

The forbid/allow asymmetry Bregje Holleman, 2021-09-13 Questionnaires are widely used in the social sciences and very often survey data form the basis for governmental and commercial planning or evaluation Yet the quality of survey data is not attested to since a large variety of factors in the language use situation prove to influence the answers unintentionally The forbid allow asymmetry is a well known example of this when respondents are asked whether something should be forbidden about 50% may answer yes forbid whereas an equivalent question phrased with the verb to allow could well cause up to 75% of the respondents to answer no it should not be allowed Which question wording is preferable to measure respondents true attitudes Only when we know why the answers differ can we decide on that This book is the first to apply a systematic cognitive approach to describe the causes of the forbid allow asymmetry The question answering process is unravelled by a variety of experiments and meta analytic techniques Analyses reveal that the difference in question wording does not prompt respondents to retrieve different attitudes Instead the asymmetry reflects that the question wording causes the response options to be used differently Because of the qualifying dimensions in the question text the meanings of yes and no change as well as the cognitive distance between them This study sheds a different light on processes of question answering and text interpretation Furthermore practical advice on questionnaire design and on the interpretation of survey data is given on the basis of these new insights

Postmodern Interviewing Jaber F. Gubrium, 2003-03-21 Interview roles are less clear than they once were and in some cases the roles are even exchanged to promote new opportunities for understanding the shape and evolution of selves and experience Postmodern Interviewing offers readers an exploration of the postmodern interview a conversation with diverse purposes in which the communicative format is constructed as much within the interview conversation as it stems from predesignated research interests It provides cutting edge discussions of emerging horizons featuring reflexivity poetics and power along with discussions of new ways of gathering experiential knowledge Employing concepts from anthropology family studies history and sociology the contributors present the ambitious new directions in which the interview has gone such as How the interview process is refracted through the lens of language knowledge culture and difference How the dividing line between fact and fiction is blurred to promote richer understanding How standardized representation has given way to representational invention By exploring these exciting developments readers will be exposed to the engaging opportunities for understanding the shape and evolution of selves and social worlds that are made possible through changes in the interview process This volume is

compensations for the effects of nonresponse on key survey estimates *Laboratory Psychology* Julia Nunn, 2018-10-24
 Experimental design is important enough to merit a book on its own without statistics that instead links methodology to a discussion of how psychologists can advance and reject theories about human behaviour. The objective of this book is to fulfil this role. The first four chapters lay the foundations of design in experimental psychology. The first chapter justifies the prominent role given to methodology within the discipline whilst chapters two and three describe between subject and within subject designs. Chapter four compares and contrasts the traditional experimental approach with that of the quasi experimental or correlational approach concluding that the consequences of not recognizing the value of the latter approach can be far reaching. The following three chapters discuss practical issues involved in running experiments. The first of these offers a comprehensive guide to the student researcher who wants to construct a good questionnaire including a discussion of reliability and validity issues. The next chapter considers the basic tools of psychological research whilst both discussing the theoretical problem of how a sample from a population is chosen and offering useful hints on the practical issue of finding adequate populations from which to select participants. The next chapter considers ethical practice within psychological research written in large part so that psychology students will be better able to anticipate ethical problems in their studies before they occur. The final two chapters consider reporting and reading psychological papers. Chapter eight details what should and should not be included in a laboratory report. The contributors use their collective experience of marking numerous lab reports to highlight common errors and provide solutions. Finally chapter nine describes the various elements of a journal article including tips on how to get the best out of your journal reading *Communicating Certainty and Uncertainty in Medical, Supportive and Scientific Contexts* Andrzej Zuczkowski, Ramona Bongelli, Ilaria Riccioni, Carla Canestrari, 2014-11-15
 This volume is a collection of 18 papers on the communication of certainty and uncertainty. The first part introduces recent theoretical developments and general models on the topic and its relations with modality, subjectivity, inter subjectivity, epistemicity, evidentiality, hedging, mitigation and speech acts. In the second part results from empirical studies in medical and supportive contexts are presented, all of which are based on a conversational analysis approach. These papers report on professional dialogues including advice giving in gynecological consultations, breaking diagnostic bad news to patients, emergency calls, addiction therapeutic community meetings and bureaucratic institutional interactions. The final part concerns the qualitative and quantitative analysis of corpora addressing scientific writing, both research and popular articles and academic communication in English, German, Spanish and Romanian. The collection is addressed to scholars concerned with the topical issues from a theoretical and analytical perspective and to health professionals interested in the practical implications of communicating certainty or uncertainty.
