Zinn, 2012-12-06 A comprehensive understanding of diseases of the peripheral retina is essential to the general ophthalmologist as well as to the vitreoretinal surgeon Expertise in direct ophthalmoscopy scleral depression and contact lens biomicroscopy serves as a basis for observing the peripheral retina These observations are then recorded on fundus drawing paper and the Tolentino vitreo retinal chart This orderly sequence of skills allows the ophthalmic surgeon to objectively diagnose and evaluate specific peripheral retinal disorders and plan for their therapeutic management The Clinical Atlas of Peripheral Retinal Disorders is a compilation of fundus paintings by David A Tilden based on our observations of a large number of patients over the past 15 years The atlas is organized along functional and anatomical lines After a brief introduction to the clinical anatomy of the peripheral retina the appearance of the fundus as a function of skin color and aging is presented Many of the diseases of the peripheral retina can be divided into trophic nutritional tractional and a combination of trophic plus tractional etiologies This classification system although somewhat simplistic appears adequate for our present level of understanding of the pathogenetic mechanisms of these disorders Undoubtedly once the molecular biology of these conditions is elucidated through future research the classification will be revised In addition there are other conditions that affect the peripheral retina that do not fit the proposed classification system and are covered under separate headings i e

The Chicago Eye and Emergency Manual Thomas John, 2011-06. This manual is introduced globally to the ophthalmic community with the primary focus on the practicing eye care provider and all those involved in or interested in the management of ocular diseases. Ocular management issues are complex and inter related to basic science and to clinical presentations of a large spectrum of ocular diseases. Of equal importance is the recognition and diagnosis of the individual patient's ocular disease state. Proper diagnosis will then channel the clinician in the correct direction to engage in the optimal management of the ocular condition and thus relieve the patient's signs and symptoms and possibly improve the way the patient sees the world. All these clinical activities are often performed within a very narrow time slot with limited chair time for the individual patient. It is of paramount importance to maximally utilize this limited time segment to deliver the best possible care to our patients. At the same time it is important not to compromise eye care at the expense of speed. Hence a clinician often needs the diagnostic and therapeutic reference materials that can be used in a short time to answer his clinical questions. With this in mind the text is written in an easy to read quick reference format while at the same time providing an extensive and most comprehensive material that the clinician will find extremely useful. Also practical images are inserted throughout the text to complement the process of clinical patient care. This book helpful for practising ophthalmologists and students.
