Allen, 2012-12-06 Advances in surgery have reached an exponential scale and the changes of the last decade of the twentieth century have become common practice Imagination and foresight are the more visible standards for professional appointments than ever before The fiber optic cable computer and Internet are the workhorses of this sea change and surgeons must master all of them to remain intellectually and technically up to date There can be no better explanation for the genuine need for this book The transmission of knowledge and technical skills from one generation to another has been a common practice in surgery for nearly 200 years Past experiences of surgeons have focused upon an understanding of disease states a prompt diagnosis of a correctable illness and its appropriate evaluation and most importantly the technical conduct of an operation where indicated to provide relief to and or cure of the patient Fascinatingly this little book tends to fulfill that same role with respect to the newly emerged technology of the Internet computation and telemedicine In essence this book seeks and to a remarkable degree achieves the transmission of both knowledge and technical skill in an easily usable and clearly written format Jeff W Allen has provided an educational orientation with which he is familiar both as a recent pupil and now as a teacher of surgical procedures This is not unlike the kind of education that has gone on between trainee surgeons and master surgeons around the world In this case Dr

Causation, Prediction, and Search Peter Spirtes, Clark Glymour, Richard Scheines, 2001-01-29 The authors address the assumptions and methods that allow us to turn observations into causal knowledge and use even incomplete causal knowledge in planning and prediction to influence and control our environment What assumptions and methods allow us to turn observations into causal knowledge and how

can even incomplete causal knowledge be used in planning and prediction to influence and control our environment In this book Peter Spirtes Clark Glymour and Richard Scheines address these questions using the formalism of Bayes networks with results that have been applied in diverse areas of research in the social behavioral and physical sciences The authors show that although experimental and observational study designs may not always permit the same inferences they are subject to uniform principles They axiomatize the connection between causal structure and probabilistic independence explore several varieties of causal indistinguishability formulate a theory of manipulation and develop asymptotically reliable procedures for searching over equivalence classes of causal models including models of categorical data and structural equation models with and without latent variables The authors show that the relationship between causality and probability can also help to clarify such diverse topics in statistics as the comparative power of experimentation versus observation Simpson's paradox errors in regression models retrospective versus prospective sampling and variable selection The second edition contains a new introduction and an extensive survey of advances and applications that have appeared since the first edition was published in 1993
