Carbonate Reservoirs Porosity Evolution and Diagenesis in a Sequence Stratigraphic Framework **Carbonate Reservoirs** Clyde H. Moore, William J. Wade, 2013-08-12

The 2nd Edition of *Carbonate Reservoirs* aims to educate graduate students and industry professionals on the complexities of porosity evolution in carbonate reservoirs. In the intervening 12 years since the first edition, there have been numerous studies of value published that need to be recognized and incorporated in the topics discussed. A chapter on the impact of global tectonics and biological evolution on the carbonate system has been added to emphasize the effects of global earth processes and the changing nature of life on earth through Phanerozoic time on all aspects of the carbonate system. The centerpiece of this chapter and easily the most important synthesis of carbonate concepts developed since the 2001 edition is the discussion of the CATT hypothesis, an integrated global database bringing together stratigraphy, tectonics, global climate, oceanic geochemistry, carbonate platform characteristics, and biologic evolution in a common time framework. Another new chapter concerns naturally fractured carbonates, a subject of increasing importance given recent technological developments in 3D seismic reservoir modeling and reservoir production techniques. Detailed porosity classifications schemes for easy comparison. Overview of the carbonate sedimentologic system. Case studies to blend theory and practice.

Sedimentation and Stratigraphy of Carbonate Rock Sequences, 1989 **Linking Diagenesis to Sequence Stratigraphy** Sadoon Morad, Marcelo Ketzer, Luis F. de Ros, 2012-11-05

Sequence stratigraphy is a powerful tool for the prediction of depositional porosity and permeability but does not account for the impact of diagenesis on these reservoir parameters. Therefore, integrating diagenesis and sequence stratigraphy can provide a better way of predicting reservoir quality. This special publication consists of 19 papers, reviews, and case studies exploring different aspects of the integration of diagenesis and sequence stratigraphy in carbonate siliciclastic and mixed carbonate siliciclastic successions from various geological settings. This book will be of interest to sedimentary petrologists aiming to understand the distribution of diagenesis in siliciclastic and carbonate successions to sequence stratigraphers who can use diagenetic features to recognize and verify interpreted key stratigraphic surfaces and to petroleum geologists who wish to develop more realistic conceptual models for the spatial and temporal distribution of reservoir quality. This book is part of the International Association of Sedimentologists (IAS) Special Publications. The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists. Papers are reviewed and printed to the same high standards as those published in the journal *Sedimentology* and several of these volumes have become standard works of reference.
