Guía para la reducción de la vulnerabilidad en el diseño de nuevos establecimientos de salud Rubén Boroschek Krauskopf, 1995 Habitualmente los planes de protección o de mitigación de instalaciones de salud frente a desastres prevén la seguridad de las personas y no tanto de las instalaciones o de la operatividad de los servicios Pero la experiencia reciente ha mostrado que es posible seguir procedimientos para disponer de nuevos establecimientos de salud capaces no solo de garantizar el objetivo de seguridad de las personas como a sido tradicional hasta el momento sino de garantizar los objetivos de seguridad de la infraestructura y de la operación De esta manera dependiendo de las características de la red de servicios de salud y de los recursos económicos disponibles es posible establecer estratégicamente establecimientos con una alta seguridad en su operación e infraestructura y establecimientos con una alta protección en su infraestructura que si bien se espera que funcionen inmediatamente después de una emergencia pueden ser recuperada en plazos razonables y con costos controlados Pero si los recursos son limitados o las condiciones naturales o técnicas no lo permiten la prioridad es siempre

garantizar la seguridad de las personas Para alcanzar los distintos objetivos de protecci n es necesario establecer nuevos criterios de desarrollo y de aseguramiento de la calidad desde el inicio hasta final del proyecto de construcci n de nuevas instalaciones de salud De acuerdo con la experiencia el costo econ mico de aplicar estos objetivos es menos al 4% del costo total de la obra y en algunos casos es pr cticamente cero ya que solo ha implicado o la selecci n de una ubicaci n distinta o el cambio de una filosof a de dise o En todo caso este valor resulta marginal si se compara con los costos econ micos de recuperar una estructura da ada por la acci n de un fen meno natural y con las consecuencias sociales pol ticas y econ micas que genera la p rdida de un establecimiento de salud
