This catalog is the first in depth investigation of comets that were reported since the 17th century but not confirmed and subsequently lost Volume I of this two volume work covers objects observed between 1600 and 1899 a period that was dominated by visual observations and was experiencing a rapid evolution in science The book uniquely combines the history and culture of comet hunting and discovery with modern tools of orbital mechanics to present a wholesome catalog of unconfirmed and suspected comets Each case includes a presentation of the observations a discussion about the observer when possible consideration of the historic context and a conclusion as to the nature of the object In most cases the book presents material from original sources including some never before published that were acquired from observatories libraries and historical societies around the world Although some of these unconfirmed comets turned out to be misidentifications of planets or star clusters fabrications or poor observations of comets that were already being observed the Authors did identify many objects that were likely real comets In some cases the Authors were even able to derive orbits for the first time These observations may be valuable in the future as they could prove to be observations of periodic comets still to be discovered **Physics Of Comets (2nd Edition)** K S Krishna Swamy, 1997-05-03

The study of Comet Halley in 1986 was a tremendous success for cometary science In March of that year six spacecrafts passed through Comet Halley as close as 600 km from the nucleus and made the in situ measurements of various kinds These space missions to Comet Halley and that of the ICE spacecraft to Comet Giacobini Zinner combined with studies both ground based and above the atmosphere have increased our knowledge of cometary science in a dramatic way This new edition of Physics of Comets incorporates these new and exciting findings The emphasis of the book is on the physical processes operating in a cometary environment It discusses up to date observations methods and results based on the study of various comets The subject is developed in a systematic manner covering various aspects of cometary phenomena This book may serve as a text book for students and as reference material for researchers

The Search For Our Cosmic Ancestry Nalin Chandra Wickramasinghe, 2014-10-21 The idea that life is a cosmic rather than a purely terrestrial phenomenon has progressed from scientific heresy to mainstream science within the short timespan of a few decades The theory of cometary panspermia developed by Fred Hoyle and the present author in the 1970 s has been vindicated by a spate of new discoveries

in astronomy and biology and also with startling new evidence of microbial fossils in meteorites and micrometeorites The recent Kepler Telescope searches for exoplanets have indicated the presence of over 100 billion habitable planets separated by only a few light years thus making panspermia and the transfer of microbial life between such planets an inevitable fact The book presents a comprehensive and up to date account of the Hoyle Wickramasinghe theory of cometary panspermia in a manner accessible to a wide general readership
