Loss And Restoration Of Regenerative Capacity In Tissue And Organs Of Animals:

Loss and Restoration of Regenerative Capacity in Tissues and Organs of Animals Lev Vladimirovich Polezhaev, 1972 This well illustrated monograph is the first summary in English of L V Polezhaev's important but lesser known work on the regenerative phenomena in mammalian forms conducted since World War II During this period Soviet research underwent a pronounced shift in emphasis from basic biological studies based primarily upon amphibians to more practically oriented problems in mammalian systems Polezhaev's experimentation underwent a corresponding shift but the focus on restoration of lost regenerative capacity was retained since his earlier work which is also reviewed here on limb regeneration in frogs Following a theoretical discussion the monograph centers upon the author's most profound innovations a successful method for producing bone to heal large skull defects original research on heart regeneration and trials in the restoration of limb regeneration following X irradiation

Liozner,2013-03-09 The main theme of this monograph conditions of regeneration of organs in mammals reflects an area of
increasing emphasis which permeates much current Soviet research on regeneration The introduction of this theme goes
back about 25 years and emphasis on the influence of environmental conditions upon regenerative processes has fluctuated
until the mid 1960s when the viewpoints on this subject were established in much the same form as they are expressed in
this book For years Russian regeneration research has been characterized by the presence of several dominant and often
conflicting schools of thought Since an acquaintance with these makes the interpretation of many of the theoretical
implications of this book particularly in the introductory and concluding chapters considerably clearer those not familiar
with the Russian literature might profit by reading my brief survey of this field Carlson B M 1968 Regeneration research in
