Lu, Songmao Zhang, 2003-08-06 We are both fans of watching animated stories Every evening before or after dinner we always sit in front of the television and watch the animation program which is originally produced and shown for children We find ourselves becoming younger while immersed in the interesting plot of the animation how the princess is first killed and then rescued how the little rat defeats the big cat etc But what we have found in those animation programs are not only interesting plots but also a big chance for the application of computer science and artificial intelligence techniques As is well known the cost of producing animated movies is very high even with the use of computer graphics techniques Turning a story in text form into an animated movie is a long and complicated procedure We came to the conclusion that many parts of this process could be automated by using artificial intelligence techniques It is actually a challenge and test for machine intelligence So we decided to explore the possibility of a full life cycle automation of computer animation generation By full life cycle we mean the generation process of computer animation from a children's story in natural language text form to the final animated movie It is of course a task of immense difficulty However we decided to try our best and to see how far we could go
