Magnesium in Cellular Processes and Medicine B. M. Altura, J. Durlach, M. S. Seelig, S. Mildred, 1987-09-11 **The Cellular Basis of Cardiovascular Function in Health and Disease** Pawan K. Singal, Vincenzo Panagia, Grant N. Pierce, 2012-12-06 This special issue of Molecular and Cellular Biochemistry contains original research articles and review papers which were invited from the participants of a recent meeting organized to honour the 60th birthday of Naranjan S. Dhalla. Ph.D. M.D. Hon. The meeting organized by Drs. Morris Karmazyn (London), Grant Pierce (Winnipeg) and Balwant Tuana (Ottawa) was held at the Best Western Lakeside Inn in Kenora, Ontario, Canada, on August 23-25, 1996. The meeting was entitled "The Cellular Basis of Cardiovascular Function in Health and Disease." There were over 40 invited speakers from 15 different countries represented at the meeting attended by over 280 people. Keynote lectures were presented by Drs. Norman Alpert (Burlington, VT), Robert Jennings (Chapel Hill, NC), Makoto Nagano (Tokyo, Japan), Howard Morgan (Danville, PA), John Solaro (Chicago, IL), and Nobuskira Takeda (Tokyo, Japan). Dr. Henry Friesen, President of the Medical Research Council of Canada, presented Dr. Dhalla with a plaque at the banquet honouring his research accomplishments over his distinguished career. Dr. Dhalla's outstanding research achievements in understanding the subcellular basis of cardiovascular disease were highlighted at the meeting. One of the unique aspects of the meeting was the special effort made by 39 former trainees of Dr. Dhalla to attend the meeting to honour their mentor. The ex-students and trainees came from all over Canada, the United States, Japan, Slovakia, Germany, the Czech Republic, Estonia, and the Netherlands. The meeting was judged to be an overwhelming success in terms of the scientific content as well as collaborative interactions initiated.

The Miracle of Magnesium Carolyn Dean, M.D., N.D., 2007-12-18 More than seventy-five years ago, medical scientists declared magnesium to be an essential nutrient indispensable to life. When this mineral is part of your diet, you are guarding against and helping to alleviate health threats such as heart disease, stroke, osteoporosis, diabetes, depression, arthritis, and asthma. But while research continues to reaffirm magnesium's irreplaceable contribution to good health, many Americans remain dangerously deficient. In *The Miracle of Magnesium*, Dr. Carolyn Dean, an authority on this mineral who has used it with dramatic success in her own practice, explains the vital role that magnesium plays in the control of many serious ailments, from painful muscle spasms and bladder problems to traumatic brain injury and complications of pregnancy and childbirth. Inside, you will discover how diets and lifestyles can create a dangerous magnesium deficiency, which magnesium-rich foods keep your vital organs healthy and which to avoid. Why other nutrients including calcium need magnesium to become potent. What vitamins and minerals work with magnesium to treat specific ailments. Why prescription medicines such as birth control pills can deplete magnesium. Which magnesium supplements are best for you. Whether you need help with a serious health problem or merely want to protect the good health you already enjoy. *The Miracle of Magnesium* will answer all your questions. It may even save your life. Praise for *The Magnesium Miracle*. Dr. Carolyn Dean has the best credentials for bringing solutions to those suffering from the hidden

of the main leaders in the field of the magnesium research and medical applications delivered at the 8 International Symposium on Magnesium which took place on 5-9 October 1997 in Heraklion Crete under the chairmanship of Professor Theophilos Theophanides. The meeting was sponsored by the National Technical University of Athens and Ministry of Industry, Energy and Technology. The aim of this meeting was to promote research and applications of magnesium and interface between medical doctors, clinicians and scientists in order to understand the mechanisms responsible for magnesium involvement in the pathogenesis of diseases, its biological significance, metabolism and many other utilizations which are associated with membranes and cells. The success of this interface is due to the contribution of its participants who came from all continents and to their high scientific level. The topics which were presented and the questions which were asked concerned mechanisms of mode of action of free magnesium cations, Mg^{2+} hydrated cations, $2 Mg^{2+} 6 H_2O$ and magnesium linked cations $Mg-L_xH_0$ where L ligand and $x = 2, 1, 6$. We would like to express our utmost gratitude to the sponsors and to extend our deep appreciation and thanks to all those who helped and encouraged the scientific and material organization of this meeting. We wish to thank all the members of the scientific committee and the organizing committee.

Applications Of Nuclear Microprobes In The Life Sciences Yvan Llabador, Philippe Moretto, 1998-02-28. This book describes the capabilities of nuclear techniques for elemental microanalysis in the biological field. A description of basic principles is given at the beginning with special emphasis on X-ray Fluorescence, Rutherford Backscattering Spectrometry, Nuclear Reaction Analysis and Scanning Transmission Ion Microscopy. The major part of the volume is devoted to the applications in the life sciences and presents a general review of the subjects investigated during the last fifteen years. In addition, technical aspects of nuclear microanalysis in living tissues, including data processing and specimen preparation, are detailed. Examples of recent applications in cellular pharmacology, cell physiology and biomedicine are presented. The last part concerns the studies of unicellular microorganisms involved in pollution problems. Postgraduate students and confirmed scientists will be able to find here basic information, references and practical aspects of this new tool. With in each case a comparison with other analytical techniques.

Antimutagenesis and Anticarcinogenesis Mechanisms III Giorgio Bronzetti, Hikoya Hayatsu, Silvio De Flora, Michael D. Waters, Delbert M. Shankel, 2012-12-06. Lifestyle in any part of the world is associated with the occurrence of major chronic diseases including coronary heart disease, hypertension and stroke. Many distinct types of cancer and adult onset diabetes. 11, 22, 70, 75. One important element of lifestyle is tobacco use which appreciably increases the risk of a number of chronic diseases. 21. Other lifestyle factors relate to nutritional traditions, alcohol use and exercise. 11, 30, 58, 60, 70, 71. The underlying evidence is in part based on the evidence of specific diseases in relation to dietary habits in a given geographic region as well as changes in such disease occurrences in migrant populations from a low risk to a high risk area and vice versa. 25, 42. Populations that customarily consume fruits and vegetables and also whole grain cereal products generally have a lower risk of cardiovascular diseases and specific types of cancer than

populations with a lower intake of such foods everything else being equal 63 In the last few years research has provided mechanistic explanations as to the reasons for the protective effects of specific foods This paper will emphasize the mechanisms whereby cancer risks are reduced by dietary modification

Biological and Medical Research in Space David Moore, Peter Bie, Heinz Oser, 2012-12-06 Life Science studies in space were initially driven by the need to explore how man could survive spaceflight conditions the effects of being launched under high accelerations exposed to weightlessness and radiation for different periods of time and returned to Earth in safety In order to substantiate the detailed knowledge of potentially adverse effects many model experiments were launched using organisms which ranged from bacteria plants invertebrates rodents and primates through to man Although no immediate life threatening effects were found these experiments can be considered today as the precursors to life science research in space Many unexplained effects on these life forms were attributed to the condition of weightlessness Most of them were poorly recorded poorly published or left simply with anecdotal information Only with the advent of Skylab and later Spacelab did the idea emerge and indeed the infrastructure permit weightlessness to be considered as an extended tool for research into some fundamental mechanisms or processes as associated with the effect of gravity on organisms at all levels The initial hypothesis to extrapolate from hypergravity through 1 x g to near 0 x g effects could no longer be retained since many of the experiment results were seen to contradict the models or theories in the current textbooks of biology and physiology The past decade has been dedicated
