Magnetic Resonance Imaging of Central Nervous System Diseases Werner J. Huk, Günther F. Gademann, G. Friedmann, 2012-12-06 Magnetic resonance imaging MRI is a new and still rapidly developing imaging technique which requires a new approach to image interpretation Radiologists are compelled to translate their experience accumulated from X ray techniques into the language of MRI and likewise students of radiology and interested clinicians need special training in both languages Out of this necessity emerged the concept of this book as a manual on the application and evaluation of proton MRI for the radiologist and as a guide for the referring physician who wants to learn about the diagnostic value of MRI in specific conditions After a short section on the basic principles of MRI the contrast mechanisms of present day imaging techniques knowledge of which is essential for the analysis of relaxation times are described in greater detail This is followed by a demonstration of functional neuroanatomy using three dimensional view of MR images and a synopsis of frequent neurological symptoms and their topographic correlations which will facilitate examination strategy with respect to both accurate diagnosis and economy [Magnetic Resonance Imaging of Central Nervous System Diseases](#) I Baer, D Baleriaux, G M Bydder, 1989-12-04 *Magnetic Resonance Imaging of Central Nervous System Diseases* Walter Josef Huk, Günther Gademann, Gerd Friedmann, 1990 Magnetic resonance imaging MRI is a new and still rapidly developing imaging technique which requires a new approach to image interpretation Radiologists are compelled to translate their experience accumulated from X ray techniques into the language of MRI and likewise students of radiology and interested clinicians need special training in both languages Out of this necessity emerged the concept of this book as a manual on the application and evaluation of proton MRI for the radiologist and as a guide for the referring physician who wants to learn about the diagnostic value of MRI in specific conditions After a short section on the basic principles of MRI the contrast mechanisms of present day imaging techniques knowledge of which is essential for the analysis of relaxation times are described in greater detail This is followed by a demonstration of functional neuroanatomy using three dimensional view of MR images and a synopsis of frequent neurological symptoms and their topographic correlations which will facilitate examination strategy with respect to both accurate diagnosis and economy [National Library of Medicine Current Catalog](#) National Library of Medicine (U.S.), 1991 [Current Catalog](#) National Library of Medicine (U.S.), 1991 First multi year cumulation covers six years 1965 70 **Imaging of Brain Metabolism Spine and Cord Interventional Neuroradiology Free Communications** Maschallah Nadjmi, 2012-12-06 The proceedings of the XVth Congress of the European Society of Neuroradiology are presented in this volume The four main topics are new imaging of brain metabolism the spine and cord interventional neuroradiology and free communications including multiple sclerosis AIDS and the hypophysis **Imaging Techniques of the CNS of the Neonates** Joseph Haddad, Dominique Christmann, Jean Messer, 2012-12-06 There has been

increasing interest in neonatal neurology especially since imaging techniques were introduced in the neonatal ward Looking at the natural history of imaging techniques we can identify three main axes of its development Logically it was first essential to image the brain morphologically For this purpose computed tomography was initially used followed by ultra sound However to improve the quality of the images magnetic resonance imaging was introduced Major features of ultrasound and magnetic resonance imaging are their safety and lack of ionization Morphological imaging techniques have proved to be insufficient to explain the mechanisms underlying CNS injuries Thus it was essential to develop functional techniques to assess cerebral hemodynamics and oxygenation The use of Doppler ultrasound PET scanning SPECT scanning and more recently NIRS have widened our knowledge of general neurological problems Finally to achieve our goal of attaining a better understanding of CNS injuries it is important to assess cerebral cellular metabolism Magnetic resonance spectroscopy was introduced to achieve this goal We hope that this book links these different techniques in order to widen our horizon The future is promising and bound to provide further developments which however can only be understood if we grasp the present level of development
