Magnetic Electric Resonance Relaxati:

Resonances - A Volume In Honor Of The 70th Birthday Of Nicolaas Bloembergen M D Levenson, Peter S Pershan, Eric Mazur, Yuen Ron Shen, 1990-10-29 The authors are former students and research fellows of Prof Nicolaas Bloembergen winner of the Nobel Prize who has pioneered three distinct fields of science NMR masers and nonlinear optics Each author has contributed a paper of current interest inspired by some aspect of Prof Bloembergen's 50 year career This volume contains a historical record of one of the great scientists of the 20th century including a complete bibliography of his papers four of his most significant publications and evidence of his impact on generations of scientists

Nuclear Science Abstracts, 1976 **U.S. Government Research Reports**, 1962 Establishing Quantum Physics in Berlin Hubert Goenner, Giuseppe Castagnetti, 2021-01-27 This book explores Albert Einstein's move to Berlin and the establishment of the Kaiser Wilhelm Institute for Physics under his directorship Einstein's call to Berlin was supported by a group of prominent physicists including Fritz Haber Walter Nernst Max Planck Heinrich Rubens Emil Warburg and the young astronomer Erwin Freundlich in the expectation that Einstein and the institute would take the lead in advancing quantum physics in its early phase Examining both the abortive attempt and the successful opening of the institute in 1917 it also discusses in detail the institute's activities up to 1922 when Einstein relinquished the directorship as well as his reasons for stepping down The final chapter evaluates the institute's activities and its role in the advancement of physics In the end the institute only partially fulfilled the expectations of its promoters because of the waning interest in quantum physics on the part of its director and board and also because of Einstein's refusal to exert scientific leadership The book is part of a series of publications in the SpringerBriefs series on the early network of quantum physics The other books in the four volume collection address the beginnings of quantum physics research at Gttingen Copenhagen and Munich These works emerged from an expansive study on the quantum revolution as a major transformation of physical knowledge undertaken by the Max Planck Institute for the History of Science and the Fritz Haber Institute 2006 2012 For more on this project see the dedicated Feature Story The Networks of Early Quantum Theory at the Max Planck Institute for the History of Science <https://www.mpiwg-berlin.mpg.de/feature-story/networks-early-quantum-theory>

Dielectrics in Time-Dependent Fields Bozzano G Luisa, 2012-12-02 Theory of Electric Polarization Volume II Dielectrics in Time Dependent Fields focuses on the processes reactions and principles involved in the application of dielectrics in time dependent fields as well as the Kerr effect statistical mechanics and polarization The publication first examines the phenomenological theory of linear dielectrics in time dependent fields empirical description of dielectric relaxation and the relationship between macroscopic and molecular dielectric relaxation behavior Concerns cover the relationship between macroscopic and microscopic correlation functions statistical mechanics of linear dissipative systems and the relationship between response functions and correlation functions superpositions of distribution functions and the use of complex dielectric constant in problems with time dependent field sources The book then ponders on the dipole correlation function polarization in the infrared and optical frequency range and the Kerr effect and related phenomena Discussions focus on the Kerr effect in condensed systems extensions of the Kerr effect extrapolation of the refractive index to infinite wavelength results obtained from computer simulations rotational diffusion and general aspects of molecular reorientation The manuscript tackles the dielectric properties of molecular solids and liquid crystals and experimental determination of permanent dipole and quadrupole moments The text is a valuable source of data for researchers interested in the application of dielectrics in time dependent fields

Characterization and Measurement of Magnetic Materials Fausto Fiorillo, 2004-12-07 Correct and efficient measurements are vital to the understanding of materials properties and applications This is especially so for magnetic materials for which in last twenty years our understanding and use have changed dramatically New or improved materials have been created and have reached the market The Soft amorphous alloys the Fe based rare earth magnets and the giant magnetorestrictive and magnetoresistive materials have all posed challenges to measurement At the same time new digital measurement techniques have forced a change in laboratory and commercial measuring setups A revision of measuring standards also occurred in the 1990s with the result that there is now a lack of up to date works on the measurement of magnetic materials The basic objective of this work is to provide a comprehensive overview of the properties of the hard and soft magnetic materials relevant to applications and of thoroughly discussing the modern methodologies for employed in the measurement of these properties The balance of these topics results in a complete text on the topic which will be invaluable to researchers students and practitioners in industry It will be of significant interest not only to scientists working in the fields of power engineering and materials science but also to specialists in measurement who be able to easily find all the information they need Comprehensive overview of the properties of the hard and soft magnetic materials Provides applications and discusses thoroughly the modern methodologies for employed in the measurement of these properties Provides the latest up to date works on the measurement of magnetic

Connolly,2012-12-06 Research on ferroelectricity and ferroelectric materials started in 1920 with the discovery by Valasek that the variation of spontaneous polarization in Rochelle salt with sign and magnitude of an applied electric field traced a complete and reproducible hysteresis loop Activity in the field was sporadic until 1935 when Busch and co workers announced the observation of similar behavior in potassium dihydrogen phosphate and related compounds Progress thereafter continued at a modest level with the undertaking of some theoretical as well as further experimental studies In 1944 von Hippel and co workers discovered ferroelectricity in barium titanate The technological importance of ceramic barium titanate and other perovskites led to an upsurge of interest with many new ferroelectrics being identified in the following decade By 1967 about 2000 papers on various aspects of ferroelectricity had been published The bulk of this widely dispersed literature was concerned with the experimental measurement of dielectric crystallographic thermal electromechanical elastic optical and magnetic properties A critical and excellently organized compilation based on these data appeared in 1969 with the publication of Landolt Bornstein Volume 111 3 This superb tabulation gave instant access to the results in the literature on nearly 450 pure substances and solid solutions of ferroelectric and antiferroelectric materials Continuing interest in ferroelectrics spurred by the growing importance of electrooptic crystals resulted in the publication of almost as many additional papers by the end of 1969 as had been surveyed in Landolt Bornstein **Ferromagnetism / Ferromagnetismus** Henricus P.J.
