Coleman, Martin Feinberg, James Serrin, 2012-12-06 This book presents a collection of papers giving the flavor of current research activities in continuum mechanics fluid mechanics thermodynamics and the mathematical analysis related to these topics Written by leading experts in the field all the papers in this collection have been carefully refereed according to the standards of the Archive for Rational Mechanics and Analysis **Recent Developments in the Theory of Shells** Holm

Altenbach, Jacek Chróścielewski, Victor A. Eremeyev, Krzysztof Wiśniewski, 2019-09-25 This book commemorates the 80th birthday of Prof W Pietraszkiewicz a prominent specialist in the field of general shell theory Reflecting Prof Pietraszkiewicz's focus the respective papers address a range of current problems in the theory of shells In addition they present other structural mechanics problems involving dimension reduced models Lastly several applications are discussed including material models for such dimension reduced structures **Effects of Magnetoelastic Interactions in Conductive Plates**

and Shells Gevorg Baghdasaryan, Marine Mikilyan, 2015-08-26 This book investigates the stability and vibrations of conductive perfectly conductive and superconductive thin bodies in electromagnetic fields It introduces the main principles and derives basic equations and relations describing interconnected mechanical and electromagnetic processes in deformable electro conductive bodies placed in an external inhomogeneous magnetic field and under the influence of various types of force interactions Basic equations and relations are addressed in the nonlinear formulation and special emphasis is placed on the mechanical interactions of superconducting thin body plates with magnetic fields **Magnetoelastic**

Vibrations and Stability of Magnetically Active Plates and Shells Gevorg Y. Baghdasaryan, Marine A.

Mikilyan, 2024-06-25 This book introduces the reader to methods of mathematical modeling and solving non stationary dynamic problems of the theory of magnetoelasticity as well as to give an idea of the wealth of physical effects caused by the interaction of electromagnetic and mechanical phenomena in magnetically active elastic thin bodies The studies are mainly limited to a model of isotropic body under the assumption of small deformations In the first chapter of the book based on the basic connected nonlinear equations and relations of mechanics and quasi static electrodynamics of continuum media a system of equations of magnetoelasticity surface conditions and governing equations describing the behavior of disturbances in a magnetoactive medium interacting with an external magnetic field is obtained On this basis in Chapters 2 and 3 using the main equations and relations of magnetoelastic vibrations and stability of magnetically soft thin plates and shells are obtained By solving specific applied problems a number of qualitative and quantitative results were identified caused by the

interaction of mechanical and magnetic phenomena in ferromagnetic thin bodies An approximate formula is obtained to determine magnetohydrodynamic pressure on the oscillating surfaces of plate flowing by supersonic flow of perfectly conducting gas in the presence of magnetic field This formula is the generalization of well known formula obtained on the basis of the classical piston theory of gas dynamics in the case of magneto gas dynamic flow On this basis it became possible to solve complex problems of aeromagnetoelasticity In the 4th and 5th chapters magnetoelastic processes in superconducting thin shells located in stationary and non stationary magnetic fields are studied Two dimensional equations and corresponding conditions are obtained which characterize vibrations and stability of superconducting cylindrical and spherical shells under the influence of the given magnetic field By solving specific problems the possibility of loss of both static and dynamic stability of thin superconducting bodies under the influence of external magnetic field has been established The sixth chapter is devoted to mathematical modeling and investigation of issues of dynamics of magnetostrictive plates in magnetic fields stationary and non stationary of several orientations To study the processes of magnetoelastic interaction in the plate under consideration with complex physical properties of its material the main postulates of the classical theories and methods were used The influence of plate in homogeneity on the processes under consideration was also studied Dynamic processes in layered plates have been studied It is shown that heterogeneity is sufficient to control optimally the studied dynamic processes especially those that arise as a result of interaction The last 7th chapter is devoted to the investigation of stability of dielectric thin plates in a supersonic flow of perfectly conducting gas in the presence of magnetic field The problems were studied in both linear and nonlinear formulations Based on the formula obtained by the authors specific problems of stability were solved Influence of magnetic field on the flutter characteristics is studied

Problems and Solutions in

Thermoelasticity and Magneto-thermoelasticity B. Das, 2016-11-25 This book presents problems and solutions of the mathematical theories of thermoelasticity and magnetothermoelasticity The classical coupled and generalized theories are solved using the eigenvalue methodology Different methods of numerical inversion of the Laplace transform are presented and their direct applications are illustrated The book is very useful to those interested in continuum mechanics

Hygro-Thermo-Magneto-Electro-Elastic Theory of Anisotropic Doubly-Curved Shells Francesco Tornabene, 2023-10-13

This book aims to present in depth several Higher order Shear Deformation Theories HSDTs by means of a unified approach for studying the Hygro Thermo Magneto Electro Elastic Theory of Anisotropic Doubly Curved Shells In particular a general coupled multifield theory regarding anisotropic shell structures is provided The three dimensional multifield problem is reduced in a two dimensional one following the principles of the Equivalent Single Layer ESL approach and the Equivalent Layer Wise ELW approach setting a proper configuration model According to the adopted configuration assumptions several Higher order Shear Deformation Theories HSDTs are obtained Furthermore the strong and weak formulations of the corresponding governing equations are discussed and illustrated The approach presented in this volume is completely

general and represents a valid tool to investigate the physical behavior of many arbitrarily shaped structures An isogeometric mapping procedure is also illustrated to this aim Special attention is given also to advanced and innovative constituents such as Carbon Nanotubes CNTs Variable Angle Tow VAT composites and Functionally Graded Materials FGMs In addition several numerical applications are used to support the theoretical models Accurate efficient and reliable numerical techniques able to approximate both derivatives and integrals are considered which are respectively the Differential Quadrature DQ and Integral Quadrature IQ methods The Theory of Composite Thin Shells is derived in a simple and intuitive manner from the theory of thick and moderately thick shells First order Shear Deformation Theory or Reissner Mindlin Theory In particular the Kirchhoff Love Theory and the Membrane Theory for composite shells are shown Furthermore the Theory of Composite Arches and Beams is also exposed In particular the equations of the Timoshenko Theory and the Euler Bernoulli Theory are directly deduced from the equations of singly curved shells of translation and of plates
