Medicine in Australia and New Zealand Hans Baer, 2015-07-17 In the late nineteenth century on the eve of the formation of Australia as a nation state in 1902 the Australian medical system could be best described as a pluralistic one in the sense that while regular medicine constituted the predominant medical system it was not clearly the dominant one in that regular physicians faced competition from a wide array of alternative practitioners As regular medicine increasingly assumed the guise of being scientific it evolved into biomedicine and developed a link with corporate and state interests in the early twentieth century in Australia as in other capitalist developed societies Relying upon state support Australian biomedicine has achieved dominance over alternative medical system such as homeopathy herbal medicine osteopathy chiropractic and naturopathy Various social forces particularly the development of the holistic health movement have served to challenge biomedical dominance in Australia like elsewhere What started out as a popular health movement in the early 1970s has evolved into the professionalized entity that is generally referred to as complementary medicine in Australia as opposed to complementary and alternative medicine in the US and UK Complementary medicine in Australia encompasses many medical systems and therapies Since the 1980s certain heterodox medical systems particularly chiropractic osteopathy acupuncture and Chinese medicine naturopathy Western herbalism and homeopathy have achieved considerable recognition from the Australian state either at the federal level or at the state and territorial levels Indeed the Australian state appears to have gone further than any other Anglophone country in terms of providing public funding for complementary medicine education Conversely it has committed a limited amount of funding for complementary medicine research compared to the United States A Sociology of Health David Wainwright, 2008-01-18 A Sociology of Health charts a way forward for a medical

Mansky,Georg Seifert,2012-12-13 This book covers a broad spectrum of complementary and alternative medicine CAM practices employed

in pediatric oncology worldwide with a special focus on the methods widely used in Western countries. It is a scientifically based practice oriented handbook that will meet the needs of pediatric oncologists working in medical practices and hospitals. An introductory section includes a comparative overview of current CAM use in pediatric oncology in different countries. Commonly used CAM methods are then discussed in a series of chapters that provide a theoretical description of the method in question followed by more practically oriented information including scientific data if applicable. Special attention is paid to the issue of how to integrate each method into conventional pediatric oncology. The closing parts of the book consider aspects of CAM requiring further development such as institutional research and provide a road map on establishing integrative pediatric oncology worldwide. Complementary and Alternative Medicine Kevin Dew, 2021-04-20

Complementary and Alternative Medicine is a sociological investigation of complementary and alternative medicine (CAM) in contemporary society and an exploration of the forces throughout the globe across different institutions and within different therapeutic spaces that constrain or foster alternative medicine. Drawing on 30 years of research, the book identifies the trends in the use of CAM and explores the scientific, political, and social challenges that CAM faces in relation to orthodox medicine. The author examines the varieties of CAM practices and how they manifest in different institutional spaces, including public inquiries, the orthodox medical practitioner's consulting room, medical journals, and the homes of those who use CAM. It also compares unorthodox practices in different geopolitical settings, namely the global north and the global south. This book is valuable reading for higher level undergraduate and postgraduate social science students, including those in psychology, sociology, anthropology, health sciences, and related disciplines. It is relevant for courses in medical sociology, medical anthropology, and social science and health, and a broader audience interested in contemporary health issues, controversies, and alternative medicine.
