The past two decades have seen an ever accelerating growth in knowledge about molecular pathology of human diseases which received a large boost with the sequencing of the human genome in 2003 Molecular diagnostics molecular targeted therapy and genetic therapy are now routine in many medical centers The molecular field now impacts every field in medicine whether clinical research or routine patient care There is a great need for basic researchers to understand the potential clinical implications of their research whereas private practice clinicians of all types general internal medicine and internal medicine specialists medical oncologists radiation oncologists surgeons pediatricians family practitioners clinical investigators pathologists and medical laboratory directors and radiologists require a basic understanding of the fundamentals of molecular pathogenesis diagnosis and treatment for their patients Traditional textbooks in molecular biology deal with basic science and are not readily applicable to the medical setting Most medical textbooks that include a mention of molecular pathology in the clinical setting are limited in scope and assume that the reader already has a working knowledge of the basic science of molecular biology Other texts emphasize technology and testing procedures without integrating the clinical perspective There is an urgent need for a text that fills the gap between basic science books and clinical practice In the Molecular Pathology Library series the basic science and the technology is integrated with the medical perspective and clinical application **Animal Models of Cancer**

Mechanisms in the Tumor-Immune Nexus Wantao Wu,Pengpeng Zhang,Jiaheng Xie,Uday Kishore,2025-03-20 The interplay between cancer cells and the immune system is a critical area of research with recent advancements highlighting the potential of immunotherapy in offering durable responses across various cancer types Immune checkpoint inhibitors in particular have emerged as a cornerstone of cancer therapy transforming patient outcomes However the heterogeneity of tumor immune interactions poses significant challenges with a considerable fraction of patients not responding to such treatments This underscores the urgent need for a deeper understanding of the molecular and cellular underpinnings of these interactions to harness the full potential of immunotherapy This Research Topic aims to address the complex landscape of tumor immune interactions focusing on identifying and leveraging novel biomarkers and mechanisms that can predict and

enhance the efficacy of immunotherapy Given the pivotal role of the immune system in controlling and eradicating cancer understanding these interactions at a granular level could lead to more personalized and effective treatment strategies Recent advances in technologies such as next generation sequencing single cell RNA sequencing and mass cytometry have opened new avenues for dissecting the complexity of the tumor microenvironment and immune evasion strategies This collection seeks to compile cutting edge research that employs these technologies to uncover new biomarkers understand resistance mechanisms and identify potential therapeutic targets within the immune contexture of tumors By bridging gaps in knowledge and fostering innovation this topic aims to propel the field towards more predictive and responsive immunotherapy approaches *Biomedical Index to PHS-supported Research* ,1993 **Biomedical Index to**
