Biotoxins in Food Sesan Abiodun

Aransiola, Bunmi Comfort Kotun, Naga Raju Maddela, 2025-03-20 Biotoxins are naturally occurring substances present in living organisms as a way of conferring biological defense or protection on such organisms. But their presence in food has been found to be a threat to unsuspecting food consumers. While they are exploited as biocontrol agents and as a biological defense mechanism against pests and predators in the field, biotoxins are implicated in foodborne illness in humans if consumed. Naturally occurring substances present in food include glycoalkaloids found in potatoes and lectins, phytohemagglutinin in green beans and red kidney beans. **Biotoxins in Food: Threats and Benefits** discusses the natural poisons present in food, the threats posed, and the possible detection methods. This book assesses the implications of these biotoxins in food by evaluating the threats posed by the consumption of these naturally occurring poisons and the various emerging detection procedures available in the food industry. Several reports from contributing authors focus on the various threats linked to various food products and offer solutions in terms of removal. Early detection of these biotoxins to prevent food illnesses is well documented. **Key Features:** Discusses the emerging concepts of types, sources, and distribution of biotoxins in food; Addresses the prevalence and applications of biotoxins in food products; Analyzes the current detection technology of biotoxins in foods. [Guide to Sources for Agricultural and Biological Research](#) J. Richard Blanchard, Lois Farrell, 2023-07-28 **Non-Thermal Food Processing Technologies** Kaavya Rathnakumar, R. Pandiselvam, 2024-10-03 Various processes are required to preserve and extend the shelf life of food, many of which cause detrimental effects on the color and appearance of food. Alternative methods for the thermal processing of food are gaining importance day by day due to increased consumer demand for minimally processed fresh-like food products with high sensory appearance and nutritional qualities. This new book provides an informative overview of non-thermal food processing technologies that can preserve food color and appearance. The book offers comprehensive coverage of the application of emerging technologies on the color profile of different food products such as fruits, vegetables, beverages, dairy products, and meat. It discusses the influence and impact of emerging technologies on the color and appearance of foods and beverages along with their challenges and prospects. The food processing technologies discussed include cold plasma, ultrasound, microwave processing, ozone processing, ohmic heating, pulsed light, UV irradiation, pulsed electric field, high pressure processing, vacuum frying, and others. This book, **Non-Thermal Food Processing Technologies: Impact on Color Profile**, offers an important context on applying emerging food processing technologies to solve food safety issues and enhance shelf life extension while paying attention to food appearance. It is an excellent resource for food engineers and technologists, processors, nutritionists, and food industry professionals for exploring new non-thermal techniques. **Mycotoxins in Food** N.
