Myocardial Ischemia And Preconditioning:

Myocardial Ischemia and Preconditioning Naranjan S. Dhalla, Nobuakira Takeda, Manjeet Singh, Anton Lukas, 2012-12-06 Current evidence suggests that the ischemic preconditioning response is a multi factorial process consisting of an initial early trigger an intermediate mediator and an end effector Each of these steps in is now its own intense area of investigation The need to render the heart ischemic for a brief period to invoke the preconditioning response is currently the major factor limiting clinical application of this powerful cardioprotective strategy Recent research efforts have utilized brief exposures to pharmacological agents in lieu of a brief preconditioning ischemia to trigger mimic the ischemic preconditioning induced response The World Heart Congress held in Winnipeg in July 2001 provided a forum for the presentation of new insights into the basic mechanisms of ischemia and reperfusion injury as well as novel strategies to protect the heart from cell death ventricular arrhythmias and contractile dysfunction Many pioneers in the fields of ischemia reperfusion injury and preconditioning induced protection presented there and the chapters in this book represent selected papers from these symposia *Myocardial Ischemia: Mechanisms, Reperfusion, Protection* Morris Karmazyn, 2013-03-12 Myocardial ischemia and subsequent reperfusion of the ischemic myocardium represent complex phenomena encompassing numerous physiological processes This book aims at enhancing our understanding of these processes and stresses recent important developments in this very active area of research The concise state of the art reviews cover recent advances in many fields important to the area of myocardial ischemia and reperfusion including physiology pathology pharmacology biochemistry and molecular biology with reference to clinical relevance and applicability of these findings Major areas which are highlighted include vascular mechanisms resulting in myocardial ischemia cellular events in the ischemic postinfarcted and reperfused myocardium as well as new exciting developments in cardiac protection that involve both novel pharmacological approaches as well as endogenous cardioprotective mechanisms such as preconditioning Aimed at both the basic and clinical cardiovascular investigator the book comprehensively reviews the rapid progress made in recent years in understanding the etiology of myocardial ischemia and reperfusion It will further serve as an authoritative reference for all those interested in learning about the important developments in the treatment of myocardial ischemic and reperfusion disorders Myocardial Ischemia and Reperfusion Michael V. Cohen, J.M. Downey, R.J. Gelpi, Jan Slezak, 2012-12-06 The articles collected in this volume largely arose from two related meetings held last spring The first was held in Buenos Aires Argentina on April 11 12 1997 and was titled Nuevos Avances en el Fen meno de Isquemia y Reperfusi n New Advances in the Phenomenon of Ischemia and Reperfusion The second meeting took place in Star Lesn located in the High Tatras Mountains of the Slovak Republic on June 27 30 1997 Both meetings were sponsored by several organizations including the International Society and Federation of Cardiology the International Society for Heart Research and The American Heart Association **Coronary Circulation and Myocardial Ischemia** Michael R. Pinsky, Antonio Artigas, Jean-Francois

Dhainaut,2012-12-06 The coronary circulation is central to sustaining myocardial viability Unlike the circulations of most other organs if the coronary circulation becomes insufficient to sustain myocardial contractile function overall quality of life rapidly declines and life can abruptly end In partnership with the cerebral circulation the coronary circulation plays a central role in sustaining life However unlike the cerebral circulation whose function is self sufficient to define life the coronary circulation determines global blood flow and thus the initial state for the remainder of the body This unique condition together with the reality that coronary artery disease primarily affects people in their productive years of life has allowed physicians and scientists who study the heart to enjoy a privileged position in the field of medical research and clinical practice Thus it comes as little surprise that many new and exciting research developments involving the coronary circulation have recently come to the forefront of medical thinking This reality coupled with the large number of clinical trials of agents specifically designed to sustain or improve coronary flow in many disease states makes the timing of this monograph relevant The book features papers presented at a recent international symposium the fourth in a series of meetings on Applied Physiology of the Peripheral Circulation The papers selected by the editors review the most important advances in the fields of cardiology and the coronary circulation

Stunning, Hibernation, and Calcium in Myocardial Ischemia and Reperfusion Lionel H. Opie,2012-12-06 Stunning is potentially an important complication of myocardial reperfusion In contrast hibernation is an important complication of myocardial ischemia This book presents different viewpoints on these subjects taken from a series of peer reviewed articles which first appeared in Cardiovascular Drugs and Therapy and now in this book In addition a certain number of articles were directly invited for the book The introductory article is by Eugene Braunwald who with Kloner introduced the term myocardial stunning in 1982 The experimental phenomenon had first been described by Heyndrickx et al This important concept of stunning is examined from a number of points of view in a series of articles which clarify the experimental causes and the clinical implications The section on hibernation is introduced by Tubau and Rahimtoola the latter having first propounded the concept in 1989 The difference between stunning and hibernation is that stunning is essentially a post ischemic dysfunction of the myocardium temporary in nature occurring at a time when coronary blood flow is apparently normal or supranormal Hibernation on the other hand is a condition of reduced contractile activity the direct result of chronic ischemia and hence a sign of a tolerable reduction in blood flow Possibly the reduction in contractile activity of the hibernating heart balances the reduction in the oxygen availability the smart heart of Rahimtoola This non contractile heart is hibernating awaiting the return of summer after winter and willing to contract normally again whenever warm coronary blood is restored It is certain that the concepts of stunning and hibernation are here to stay that they have or will have clinical relevance and that the search for the most appropriate diagnosis and therapy for each condition is now under way Hence a greater understanding of the experimental work which underlies these two conditions is highly appropriate

Myocardial Preconditioning Cherry L.

Wainwright, James R. Parratt, 2013-11-22 This book is about the unique ability of the heart to protect itself against the serious consequences of an abrupt reduction in blood flow to the myocardium a phenomenon which is switched on by stress and termed myocardial preconditioning This volume describes the main features and characteristics of preconditioning with respect to the time course of the protective effect of the phenomenon first and second windows and the different sequelae of myocardial ischaemia against which it protects such as myocardial injury arrhythmias and contractile dysfunction The proposed mechanisms underlying the fascinating form of cardioprotection are discussed Among these are the role of endogenous labile mediators receptor linked G proteins ATP sensitive potassium channels and protein kinase C activation

Cardioprotection Against Acute Myocardial Infarction Shinya Minatoguchi, 2019-11-16 This book will provide readers with a detailed understanding of the ischemic damage to the myocardium after myocardial infarction as well as essential tools for the treatment of damaged heart after myocardial infarction It discusses various methods such as pharmacological pre and post conditioning cytokine therapy and cell therapy especially using Muse cells The coverage of Muse cell therapy which includes the latest work done by the author and his collaborators is a unique feature of the book Muse cells have self renewability and have ability to differentiate into cells with the characteristics of all three germ layers from a single cell while they are non tumorigenic It is the first book to feature the Muse cell therapy which may offer the new promising therapeutic strategy for acute myocardial infarction

Myocardial Ischemia Dennis V. P. Cokkinos, C. Pantos, Gerd Heusch, H. Taegtmeyer, 2006-03-08 Effective new treatments of heart disease are based on a refined understanding of cellular function and the heart's response to environmental stresses Not surprisingly therefore the field of experimental cardiology has experienced a phase of rapid exponential growth during the last decade The acquisition of new knowledge has been so fast that textbooks of cardiology or textbooks of cardiovascular physiology are often hard pressed to keep up with the most important conceptual advances Witness the explosive increase in knowledge about signaling pathways of cardiac growth transcriptional regulation of cardiac metabolism hormonal signaling and the complex responses of the heart to ischemia reperfusion or ischemic preconditioning This book is meant to bridge the gap between original literature and textbook reviews It brings together investigators of various backgrounds who share their expertise in the biology of myocardial ischemia Each chapter is a self contained mini review but it will soon become apparent to the reader that there is also a common thread Molecular and cellular cardiology has never been more exciting than now but ever more exciting times are yet to come The Editors ACKNOWLEDGEMENTS Publication of this book was generously supported by Sanofi Aventis Hellas Eikon creative team provided the technical assistance in preparing the manuscripts We thank Dr Bernard Swynghedauw for all his scientific support
