Calvin Alexander Jr., 2020-12-01 This book discusses the karst and pseudokarst of the Upper Midwest USA consisting of the states of Minnesota Wisconsin Iowa and Illinois the first regional synthesis in 40 years Starting with an overview of the regional geology of what is largely glaciated fluviokarst and paleokarst developed on Paleozoic carbonates but including other lithologies such as the St Peter Sandstone and the Ft Dodge Gypsum the caves

springs sinkholes and karst hydrogeology of each state are described Special attention is devoted to the region s longest caves Coldwater Cave Mystery Cave and the Minnesota Cave Preserve caves Application of tools such as data loggers and LiDAR with new conceptual models such as hypogenic speleogenesis has been transformative here Special topics include lead and zinc mining in the Driftless Area vertebrate and invertebrate cave fauna near the Laurentide ice limit the impact and policies of nutrient and herbicide intensive modern agriculture on karst and paleoclimate studies The discovery exploration institutional history of caving organizations and show caves of the Upper Midwest from the year 1700 onwards are brought up to date The top 10 historical paradigms of cave and karst science in the Midwest are reviewed Perspectives on paleontology archeology and Native American rock art are included **Report of Investigations** ,1984 **The biology of hypogean fishes** Aldemaro Romero,2013-06-29 Hypogean cave artesian fishes have fascinated researchers even before they were described in the scientific literature in 1842 Since then a number of scientists have used them to justify their own evolutionary ideas from neo Lamarckism to neo Darwinism from neutral evolution to selectionist approaches Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed there are those with features expected from living in total darkness complete blindness and depigmentation and poor in nutrients extremely low metabolic rates others differ very little if any from their epigeal surface ancestors in their morphology and physiology but not so in their behavior Some of them even live in nutrient rich environments Actually one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms blindness depigmentation than with troglomorphic ones The study of these apparently unadapted fishes is providing new insights into our understanding of the evolution of phenotypic characters founding effect behavioral and physiological adaptations The 86 species of troglomorphic fishes described so far belong to 18 different families many of which would hardly fit the notion that they were preadapted to conquer the underground environment Further many troglomorphic species show very little genotypic differentiation when compared with their putative ancestors indicating that massive phenotype changes can be achieved via little genetic reorganization a reorganization that mostly affects regulatory genes These and many other topics are discussed in this volume containing 29 papers written by 41 authors from 9 countries Hopefully this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood convergent evolution Encyclopedia of Caves and Karst Science John Gunn,2004-08-02 The Encyclopedia of Caves and Karst Science contains 350 alphabetically arranged entries The topics include cave and karst geoscience cave archaeology and human use of caves art in caves hydrology and groundwater cave and karst history and conservation and management The Encyclopedia is extensively illustrated with photographs maps diagrams and tables and has thematic content lists and a comprehensive index to facilitate searching and browsing **Federal Register** ,2013-09 Karst Hydrogeology, Geomorphology and Caves Jo De Waele,Francisco
