New Directions in Psychological Anthropology Theodore Schwartz, Geoffrey M. White, Catherine A. Lutz, 1992 The field of psychological

anthropology has changed a great deal since the 1940s and 1950s when it was often known as Culture and Personality Studies Rooted in psychoanalytic psychology its early practitioners sought to extend that psychology through the study of cross cultural variation in personality and child rearing practices Psychological anthropology has since developed in a number of new directions Tensions between individual experience and collective meanings remain as central to the field as they were fifty years ago but alongside fresh versions of the psychoanalytic approach other approaches to the study of cognition emotion the body and the very nature of subjectivity have been introduced And in the place of an earlier tendency to treat a culture as an undifferentiated whole psychological anthropology now recognizes the complex internal structure of cultures The contributors to this state of the art collection are all leading figures in contemporary psychological anthropology and they write about recent developments in the field Sections of the book discuss cognition developmental psychology biology psychiatry and psychoanalysis areas that have always been integral to psychological anthropology but which are now being transformed by new perspectives on the body meaning agency and communicative practice
