Poetry and the Irrational Philip R. Hardie,2016 The establishment of the Augustan regime presents itself as the assertion of

order and rationality in the political ideological and artistic spheres after the disorder and madness of the civil wars of the late Republic But the classical Apollonian poetry of the Augustan period is fascinated by the irrational in both the public and private spheres There is a vivid memory of the political and military furor that destroyed the Republic and also an anxiety that furor may resurface that the repressed may return Epic and elegy are both obsessed with erotic madness Dido experiences in her very public role the disabling effects of love that are both lamented and celebrated by the love elegists Didactic especially the Georgics and the related Horatian exercises in satire and epistle offer programmes for constructing rational order in the natural political and psychological worlds but at best contain uneasily an ever present threat of confusion and backsliding and for the most part fall short of the austere standards of rational exposition set by Lucretius Dionysus and the Dionysiac enjoy a prominence in Augustan poetry and art that goes well beyond the merely ornamental The person of the emperor Augustus himself tests the limits of rational categorization Augustan Poetry and the Irrational contains contributions by some of the leading experts of the Augustan period as well as a number of younger scholars An introduction which surveys the field as a whole is followed by chapters that examine the manifestations of the irrational in a range of Augustan poets including Virgil Horace Ovid and the love elegists and also explore elements of post classical reception

Classical Topics in Discrete Geometry Károly Bezdek, 2010-06-23 Geometry is a classical core part of mathematics which with its birth marked the beginning of the mathematical sciences Thus not surprisingly geometry has played a key role in many important developments of mathematics in the past as well as in present times While focusing on modern mathematics one has to emphasize the increasing role of discrete mathematics or equivalently the broad movement to establish discrete analogues of major components of mathematics In this way the works of a number of outstanding mathematicians including H S M Coxeter Canada C A Rogers United Kingdom and L Fejes Thoth Hungary led to the new and fast developing field called discrete geometry One can briefly describe this branch of geometry as the study of discrete arrangements of geometric objects in Euclidean as well as in non Euclidean spaces This as a classical core part also includes the theory of polytopes and tilings in addition to the theory of packing and covering Discrete geometry is driven by problems often featuring a very clear visual and applied character The solutions use a variety of methods of modern mathematics including convex and combinatorial geometry coding theory calculus of variations differential geometry group theory and topology as well as geometric analysis and number theory
